INTRODUCTION

Doing Business sheds light on how easy or difficult it is for a local entrepreneur to open and run a small to medium-size business when complying with relevant regulations. It measures and tracks changes in regulations affecting 11 areas in the life cycle of a business: starting a business, dealing with construction permits, getting electricity, registering property, getting credit, protecting investors, paying taxes, trading across borders, enforcing contracts, resolving insolvency and employing workers.

In a series of annual reports *Doing Business* presents quantitative indicators on business regulations and the protection of property rights that can be compared across 189 economies, from Afghanistan to Zimbabwe, over time. The data set covers 47 economies in Sub-Saharan Africa, 33 in Latin America and the Caribbean, 25 in East Asia and the Pacific, 25 in Eastern Europe and Central Asia, 20 in the Middle East and North Africa and 8 in South Asia, as well as 31 OECD high-income economies. The indicators are used to analyze economic outcomes and identify what reforms have worked, where and why.

This economy profile presents the *Doing Business* indicators for Kazakhstan. To allow useful comparison, it also provides data for other selected economies (comparator economies) for each indicator. The data in this report are current as of June 1, 2013 (except for

the paying taxes indicators, which cover the period January–December 2012).

The Doing Business methodology has limitations. Other areas important to business—such as an economy's proximity to large markets, the quality of its infrastructure services (other than those related to trading across borders and getting electricity), the security of property from theft and looting, the transparency of government procurement, macroeconomic conditions or the underlying strength of institutions—are not directly studied by Doing Business. The indicators refer to a specific type of business, generally a local limited liability company operating in the largest business city. Because standard assumptions are used in the data collection, comparisons and benchmarks are valid across economies. The data not only highlight the extent of obstacles to doing business; they also help identify the source of those obstacles, supporting policy makers in designing regulatory reform.

More information is available in the full report. *Doing Business 2014* presents the indicators, analyzes their relationship with economic outcomes and presents business regulatory reforms. The data, along with information on ordering *Doing Business 2014*, are available on the *Doing Business* website at http://www.doingbusiness.org.

For policy makers trying to improve their economy's regulatory environment for business, a good place to start is to find out how it compares with the regulatory environment in other economies. Doing Business provides an aggregate ranking on the ease of doing business based on indicator sets that measure and benchmark regulations applying to domestic small to medium-size businesses through their life cycle. Economies are ranked from 1 to 189 by the ease of doing business index. For each economy the index is calculated as the ranking on the simple average of its percentile rankings on each of the 10 topics included in the index in Doing Business 2014: starting a business, dealing with construction permits, getting electricity, property, getting credit, protecting registering investors, paying taxes, trading across borders, enforcing contracts and resolving insolvency. The ranking on each topic is the simple average of the percentile rankings on its component indicators (see the data notes for more details). The employing workers indicators are not included in this year's aggregate ease of doing business ranking, but the data are presented in this year's economy profile.

The aggregate ranking on the ease of doing business benchmarks each economy's performance on the indicators against that of all other economies in the *Doing Business* sample (figure 1.1). While this ranking tells much about the business environment in an economy, it does not tell the whole story. The ranking on the ease of doing business, and the underlying indicators, do not measure all aspects of the business environment that matter to firms and investors or that affect the competitiveness of the economy. Still, a high ranking does mean that the government has created a regulatory environment conducive to operating a business.

ECONOMY OVERVIEW

Region: Europe & Central Asia

Income category: Upper middle income

Population: 16,797,459

GNI per capita (US\$): 9,730

DB2014 rank: 50

DB2013 rank: 53*

Change in rank: 3

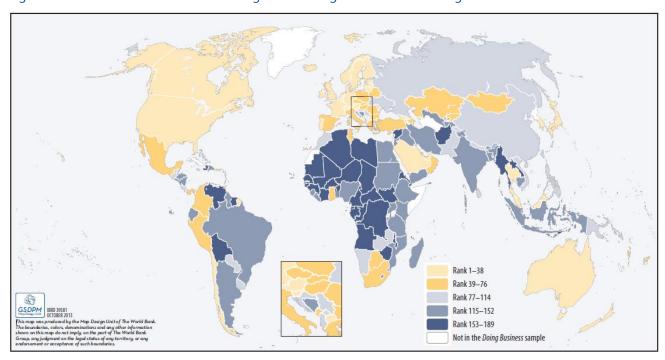

DB 2014 DTF: 62.65

DB 2013 DTF: 62.22

Change in DTF: 0.45

* DB2013 ranking shown is not last year's published ranking but a comparable ranking for DB2013 that captures the effects of such factors as data corrections and the addition of 4 economies (Libya, Myanmar, San Marino and South Sudan) to the sample this year. See the data notes for sources and definitions.

Figure 1.1 Where economies stand in the global ranking on the ease of doing business

For policy makers, knowing where their economy stands in the aggregate ranking on the ease of doing business is useful. Also useful is to know how it ranks relative to comparator economies and relative to the regional average (figure 1.2). The economy's rankings on the topics included in the ease of doing business index provide another perspective (figure 1.3).

Figure 1.2 How Kazakhstan and comparator economies rank on the ease of doing business

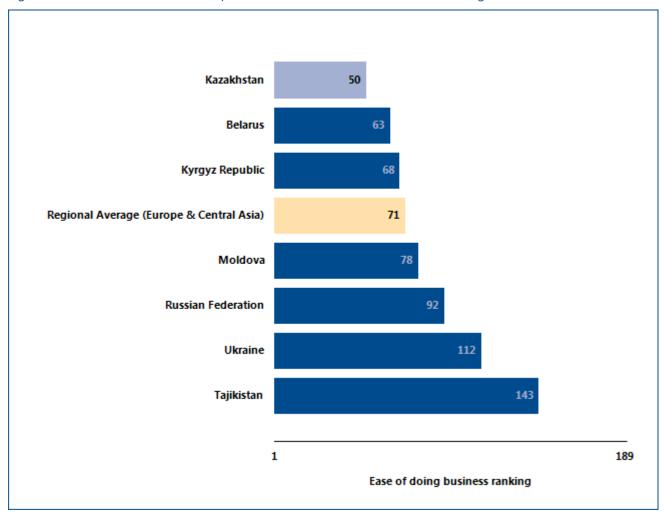

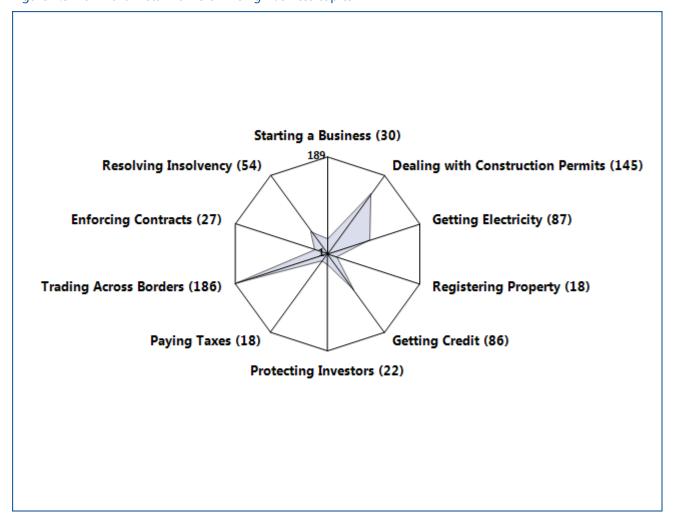

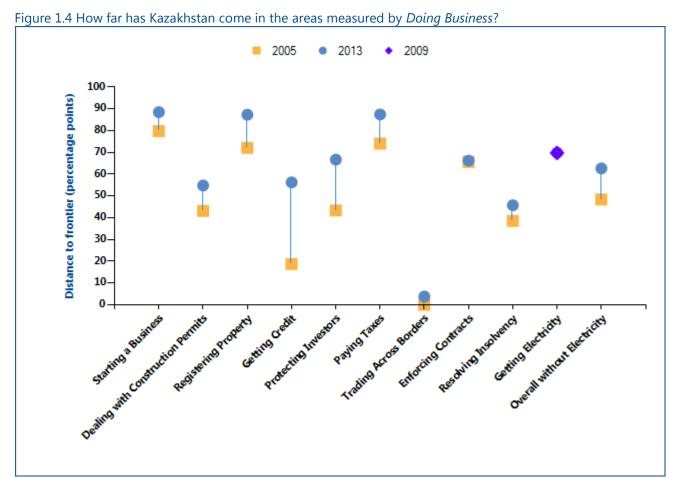

Figure 1.3 How Kazakhstan ranks on *Doing Business* topics

Just as the overall ranking on the ease of doing business tells only part of the story, so do changes in that ranking. Yearly movements in rankings can provide some indication of changes in an economy's regulatory environment for firms, but they are always relative.

Moreover, year-to-year changes in the overall rankings do not reflect how the business regulatory environment in an economy has changed over time—or how it has changed in different areas. To aid in assessing such changes, Doing Business introduced the distance to frontier measure. This measure shows how far on average an economy is from the best performance achieved by any economy on each *Doing Business* indicator since 2005, except for the getting electricity indicators, which were introduced in 2009.

Comparing the measure for an economy at 2 points in time allows users to assess how much the economy's regulatory environment as measured by *Doing Business* has changed over time—how far it has moved toward (or away from) the most efficient practices and strongest regulations in areas covered by *Doing Business* (figure 1.4).

Note: The distance to frontier measure shows how far on average an economy is from the best performance achieved by any economy on each *Doing Business* indicator since 2005, except for the getting electricity indicators, which were introduced in 2009. The measure is normalized to range between 0 and 100, with 100 representing the best performance (the frontier). The overall distance to frontier is the average of the distance to frontier in the first 9 indicator sets shown in the figure and does not include getting electricity. Data on the overall distance to frontier including getting electricity is available at http://www.doingbusiness.org/data/distance-to-frontier. See the data notes for more details on the distance to frontier measure. *Source: Doing Business* database.

The absolute values of the indicators tell another part of the story (table 1.1). The indicators, on their own or in comparison with the indicators of a good practice economy or those of comparator economies in the region, may reveal bottlenecks reflected in large numbers of procedures, long delays or high costs. Or they may reveal unexpected strengths in an area of

business regulation—such as a regulatory process that can be completed with a small number of procedures in a few days and at a low cost. Comparison of the economy's indicators today with those in the previous year may show where substantial bottlenecks persist—and where they are diminishing.

Note: DB2013 rankings shown are not last year's published rankings but comparable rankings for DB2013 that capture the effects of such factors as data corrections and the addition of 4 economies (Libya, Myanmar, San Marino and South Sudan) to the sample this year. For more information on "no practice" marks, see the data notes.

^{*} Two or more economies share the top ranking on this indicator. A number shown in place of an economy's name indicates the number of economies that share the top ranking on the indicator. For a list of these economies, see the *Doing Business* website (http://www.doingbusiness.org).

Formal registration of companies has many immediate benefits for the companies and for business owners and employees. Legal entities can outlive their founders. Resources are pooled as several shareholders join forces to start a company. Formally registered companies have access to services and institutions from courts to banks as well as to new markets. And their employees can benefit from protections provided by the law. An additional benefit comes with limited liability companies. These limit the financial liability of company owners to their investments, so personal assets of the owners are not put at risk. Where governments make registration easy, more entrepreneurs start businesses in the formal sector, creating more good jobs and generating more revenue for the government.

What do the indicators cover?

Doing Business measures the ease of starting a business in an economy by recording all procedures officially required or commonly done in practice by an entrepreneur to start up and formally operate an industrial or commercial business—as well as the time and cost required to complete these procedures. It also records the paid-in minimum capital that companies must deposit before registration (or within 3 months). The ranking on the ease of starting a business is the simple average of the percentile rankings on the 4 component indicators: procedures, time, cost and paid-in minimum capital requirement.

To make the data comparable across economies, *Doing Business* uses several assumptions about the business and the procedures. It assumes that all information is readily available to the entrepreneur and that there has been no prior contact with officials. It also assumes that the entrepreneur will pay no bribes. And it assumes that the business:

- Is a limited liability company, located in the largest business city and is 100% domestically owned.
- Has between 10 and 50 employees.
- Conducts general commercial or industrial activities.

WHAT THE STARTING A BUSINESS INDICATORS MEASURE

Procedures to legally start and operate a company (number)

Preregistration (for example, name verification or reservation, notarization)

Registration in the economy's largest business city

Postregistration (for example, social security registration, company seal)

Time required to complete each procedure (calendar days)

Does not include time spent gathering information

Each procedure starts on a separate day (2 procedures cannot start on the same day). Procedures that can be fully completed online are an exception to this rule.

Procedure completed once final document is received

No prior contact with officials

Cost required to complete each procedure (% of income per capita)

Official costs only, no bribes

No professional fees unless services required by law

Paid-in minimum capital (% of income per capita)

Deposited in a bank or with a notary before registration (or within 3 months)

- Has a start-up capital of 10 times income per capita.
- Has a turnover of at least 100 times income per capita.
- Does not qualify for any special benefits.
- Does not own real estate.

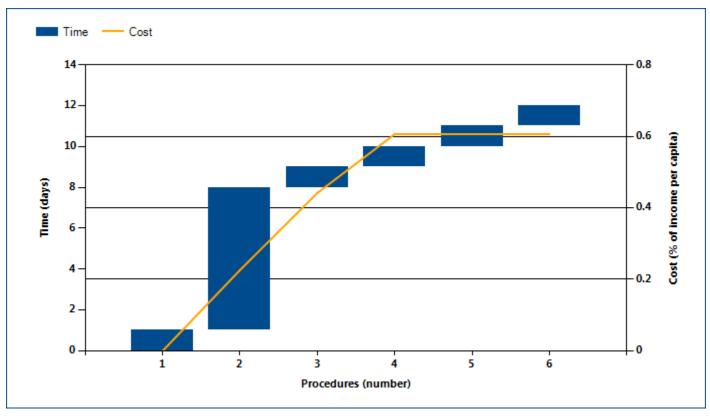

Where does the economy stand today?

What does it take to start a business in Kazakhstan? According to data collected by *Doing Business*, starting a business there requires 6 procedures, takes 12.0

days, costs 0.6% of income per capita and requires paid-in minimum capital of 0.0% of income per capita (figure 2.1).

Figure 2.1 What it takes to start a business in Kazakhstan

Paid-in minimum capital (% of income per capita): 0.0

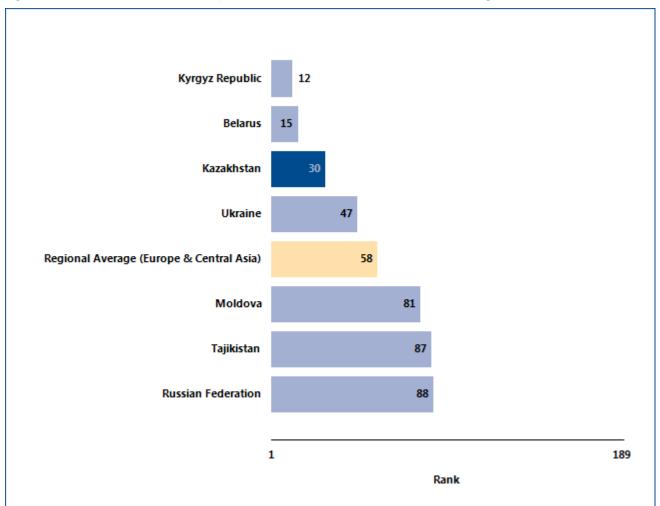

Note: Time shown in the figure above may not reflect simultaneity of procedures. Online procedures account for 0.5 days in the total time calculation. For more information on the methodology of the starting a business indicators, see the *Doing Business* website (http://www.doingbusiness.org). For details on the procedures reflected here, see the summary at the end of this chapter.

Globally, Kazakhstan stands at 30 in the ranking of 189 economies on the ease of starting a business (figure 2.2). The rankings for comparator economies and the

regional average ranking provide other useful information for assessing how easy it is for an entrepreneur in Kazakhstan to start a business.

Figure 2.2 How Kazakhstan and comparator economies rank on the ease of starting a business

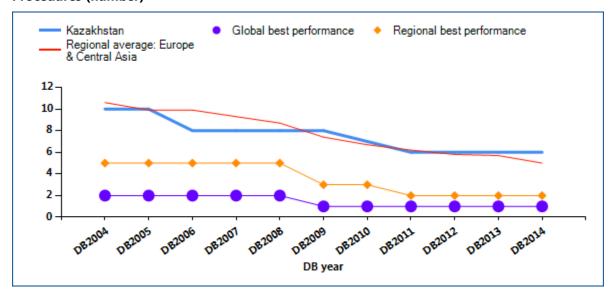

What are the changes over time?

The benchmarks provided by the economies that over time have had the best performance regionally or globally on the procedures, time, cost or paid-in minimum capital required to start a business (figure

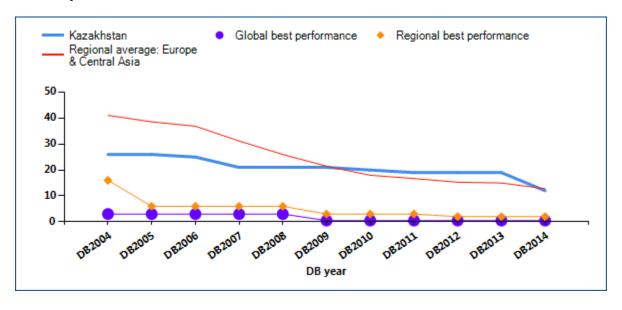

2.3) can help show what is possible in making it easier to start a business. And changes in regional averages can show where Kazakhstan is keeping up—and where it is falling behind.

Figure 2.3 Has starting a business become easier over time?

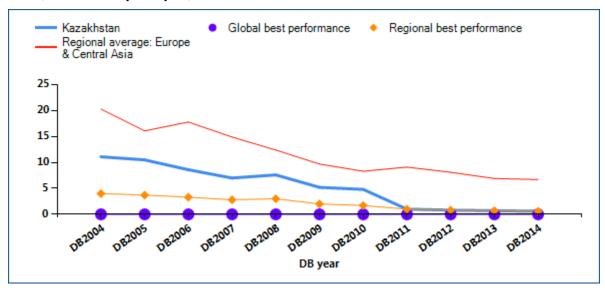

Procedures (number)

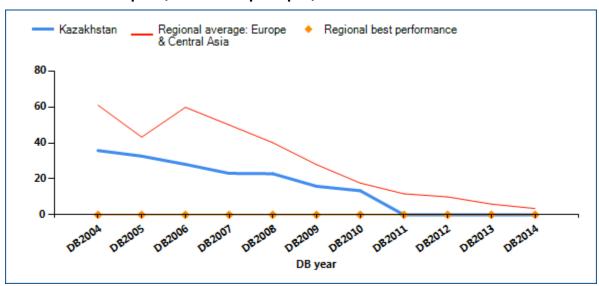

Time (days)

Cost (% of income per capita)

Paid-in minimum capital (% of income per capita)

Note: Ninety economies globally have no paid-in minimum capital requirement. DB2013 rankings shown are not last year's published rankings but comparable rankings for DB2013 that capture the effects of such factors as data corrections and the addition of 4 economies (Libya, Myanmar, San Marino and South Sudan) to the sample this year.

Source: Doing Business database.

Economies around the world have taken steps making it easier to start a business—streamlining procedures by setting up a one-stop shop, making procedures simpler or faster by introducing technology and reducing or eliminating minimum capital requirements. Many have undertaken business registration reforms in stages—and they often are part of a larger regulatory reform program. Among the benefits have been

greater firm satisfaction and savings and more registered businesses, financial resources and job opportunities.

What business registration reforms has *Doing Business* recorded in Kazakhstan (table 2.1)?

Table 2.1 How has Kazakhstan made starting a business easier—or not? By *Doing Business* report year

| DB year | Reform |
|---------|--|
| DB2009 | No reform as measured by Doing Business. |
| DB2010 | Kazakhstan simplified the business start up process by simplifying documentation requirements and abolishing the requirement to register at the local tax office. |
| DB2011 | Kazakhstan eased business start-up by reducing the minimum capital requirement to 100 tenge (\$0.70) and eliminating the need to have the memorandum of association and company charter notarized. |
| DB2012 | No reform as measured by Doing Business. |
| DB2013 | Kazakhstan made starting a business easier by eliminating the requirement to pay in minimum capital within 3 months after incorporation. |
| DB2014 | Kazakhstan made starting a business easier by reducing the time required to register a company at the Public Registration Center. |

Note: For information on reforms in earlier years (back to DB2005), see the *Doing Business* reports for these years, available at http://www.doingbusiness.org.

Source: Doing Business database.

What are the details?

Underlying the indicators shown in this chapter for Kazakhstan is a set of specific procedures—the bureaucratic and legal steps that an entrepreneur must complete to incorporate and register a new firm. These are identified by Doing Business collaboration through with relevant professionals and the study of laws, regulations and publicly available information on business entry in that economy. Following is a detailed summary of those procedures, along with the associated time and cost. These procedures are those that apply to a company matching the standard assumptions (the "standardized company") used by Doing Business in collecting the data (see the section in this chapter on what the indicators measure).

STANDARDIZED COMPANY

City: Almaty

Legal Form: Private Limited Liability Company

Paid in Minimum Capital Requirement: None

Start-up Capital: 10 times GNI per capita

Summary of procedures for starting a business in Kazakhstan—and the time and cost

| No. | Procedure | Time to complete | Cost to complete |
|-----|---|------------------|------------------|
| 1 | Pay registration fee into the account of the Ministry of Justice A fee for registration of the company is paid to the bank. It's a separate window (a bank branch) inside the building of the Center for servicing populations. Registration fee has to be paid and a receipt submitted when submitting the package of documents. | 1 day | no charge |
| 2 | State registration of legal entity and tax registration at the Public Registration Center The following documents should be submitted to the registrar: Application form; Copies of ID; Document confirming the payment of the state registration fee (KZT 3236); If necessary the Power of attorney on the representative shall be presented also. Registration fees are 2 times the index (1MCI for 2013 is KZT 1731) | 7 days | KZT 3462 |

| No. | Procedure | Time to complete | Cost to complete |
|-----|---|------------------|--------------------------|
| 3 | Make a company seal To make a company seal, promoters must file a copy of certificate of state registration of the company; a power of attorney, if the person is not the director; and a letter of application requesting the seal, with required information about the seal content. | 1 day | KZT 2,000 - KZT 4,500 |
| 4 | Notarize certificate of state registration and other post-registration documents Under the Tax Code of January 1, 2009 Article 536(15), the notary fee for certifying copies of the state registration and other post registration documents shall be 10% of the MCI per page. Each registration document is a two-page document, and the total for one set of certified copies (if the charter had 10 pages) would be 10% of MCI x 16 pages. One set of notarized copies of the registration documents and the charter is usually required to open a bank account. Additional copies would be needed if the company were to apply for work permits to employ expatriates, obtain licenses and other operational permits, or set up subsidiaries or acquire shares or ownership interests in other legal entities. | | 10% MCI per page |
| 5 | Open the current account in the bank To open a current account, the founder must provide the bank with the following documents: • Cards with sample signatures and an imprint of the company seal. • Copy of the state registration certificate of legal entity from the registration body of the Ministry of Justice of the Republic of Kazakhstan. • Notarized copy of the charter, or other document confirming activity of the legal entity operating on the basis of a standard charter. • Copies of identity documents for person(s) listed on the signature card(s) and company founders. • Application for bank account setup (bank-provided form). | 1 day | no charge |
| 6 | Register for the obligatory insurance of life and health for employees Each employee should have employer-paid insurance according to the Law On Obligatory Insurance of The Liability of the Employer for Life and Health Tort to The Employee in Discharge of Labor and (Official) Duties (February 7, 2005) that became effective on July 1, 2005. The amount of insurance premium payable by an employer depends on insurance risks and wages. To assess risks, the insurance companies place all insurable personnel into three categories: administrative, operational, and support. Amounts of the insurance premium vary from 0.04% to 9.99%. According to 7 May 2007 amendments to the law on obligatory insurance, an employer is required to get an insurance policy within 10 business days from the date of state registration indicated in | 1 day | no charge |

| No. | Procedure | Time to complete | Cost to complete |

| | the company's Certificate of State Registration | | |
| | | | |
| | | | |

^{*} Takes place simultaneously with another procedure.

Note: Online procedures account for 0.5 days in the total time calculation.

Regulation of construction is critical to protect the public. But it needs to be efficient, to avoid excessive constraints on a sector that plays an important part in every economy. Where complying with building regulations is excessively costly in time and money, many builders opt out. They may pay bribes to pass inspections or simply build illegally, leading to hazardous construction that puts public safety at risk. Where compliance is simple, straightforward and inexpensive, everyone is better off.

What do the indicators cover?

Doing Business records the procedures, time and cost for a business in the construction industry to obtain all the necessary approvals to build a warehouse in the economy's largest business city, connect it to basic utilities and register the property so that it can be used as collateral or transferred to another entity.

The ranking on the ease of dealing with construction permits is the simple average of the percentile rankings on its component indicators: procedures, time and cost.

To make the data comparable across economies, *Doing Business* uses several assumptions about the business and the warehouse, including the utility connections.

The business:

- Is a limited liability company operating in the construction business and located in the largest business city.
- Is domestically owned and operated.
- Has 60 builders and other employees.

The warehouse:

- Is a new construction (there was no previous construction on the land).
- Has complete architectural and technical plans prepared by a licensed architect or engineer.

WHAT THE DEALING WITH CONSTRUCTION PERMITS INDICATORS MEASURE

Procedures to legally build a warehouse (number)

Submitting all relevant documents and obtaining all necessary clearances, licenses, permits and certificates

Submitting all required notifications and receiving all necessary inspections

Obtaining utility connections for water, sewerage and a land telephone line

Registering the warehouse after its completion (if required for use as collateral or for transfer of the warehouse)

Time required to complete each procedure (calendar days)

Does not include time spent gathering information

Each procedure starts on a separate day. Procedures that can be fully completed online are an exception to this rule.

Procedure considered completed once final document is received

No prior contact with officials

Cost required to complete each procedure (% of income per capita)

Official costs only, no bribes

- Will be connected to water, sewerage (sewage system, septic tank or their equivalent) and a fixed telephone line. The connection to each utility network will be 10 meters (32 feet, 10 inches) long.
- Will be used for general storage, such as of books or stationery (not for goods requiring special conditions).
- Will take 30 weeks to construct (excluding all delays due to administrative and regulatory requirements).

Where does the economy stand today?

What does it take to comply with the formalities to build a warehouse in Kazakhstan? According to data collected by *Doing Business*, dealing with construction permits there requires 29 procedures, takes 157.0 days and costs 87.3% of income per capita (figure 3.1).

Time Cost 200 100 80 150 Cost (% of income per capita) Time (days) 100 50 20 10 25 15 20 Procedures (number)

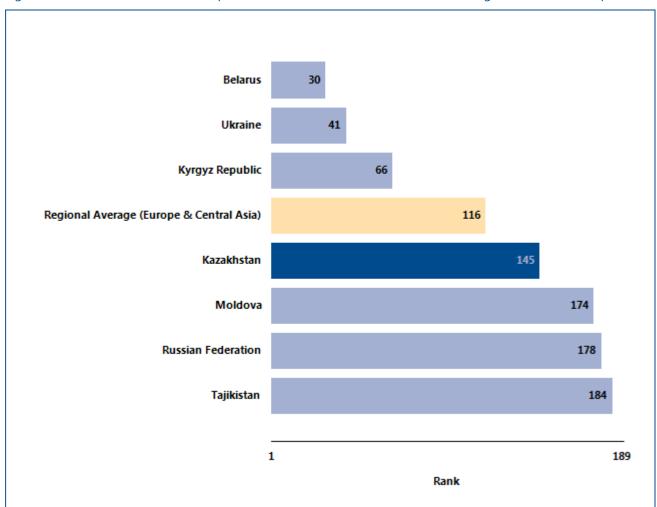

Figure 3.1 What it takes to comply with formalities to build a warehouse in Kazakhstan

Note: Time shown in the figure above may not reflect simultaneity of procedures. Online procedures account for 0.5 days in the total time calculation. For more information on the methodology of the dealing with construction permits indicators, see the *Doing Business* website (http://www.doingbusiness.org). For details on the procedures reflected here, see the summary at the end of this chapter.

Globally, Kazakhstan stands at 145 in the ranking of 189 economies on the ease of dealing with construction permits (figure 3.2). The rankings for comparator economies and the regional average

ranking provide other useful information for assessing how easy it is for an entrepreneur in Kazakhstan to legally build a warehouse.

Figure 3.2 How Kazakhstan and comparator economies rank on the ease of dealing with construction permits

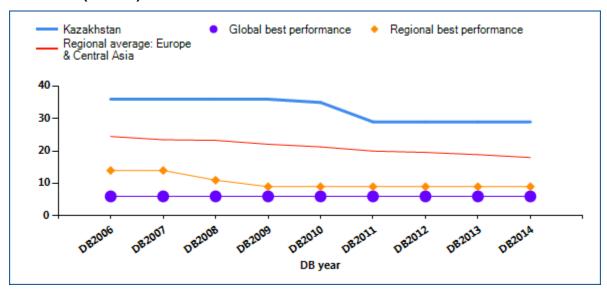

What are the changes over time?

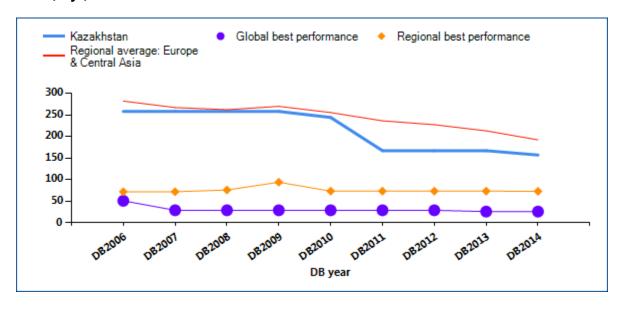

The benchmarks provided by the economies that over time have had the best performance regionally or globally on the procedures, time or cost required to deal with construction permits (figure 3.3) help show what is possible in making it easier to deal with construction permits. And changes in regional averages can show where Kazakhstan is keeping up—and where it is falling behind.

Figure 3.3 Has dealing with construction permits become easier over time?

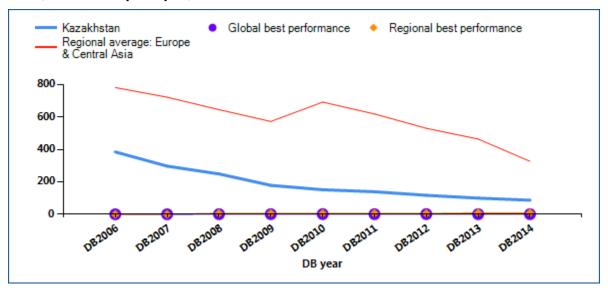

Procedures (number)

Time (days)

Cost (% of income per capita)

Note: DB2013 rankings shown are not last year's published rankings but comparable rankings for DB2013 that capture the effects of such factors as data corrections and the addition of 4 economies (Libya, Myanmar, San Marino and South Sudan) to the sample this year. For more information on "no practice" marks, see the data notes.

Source: Doing Business database.

Smart regulation ensures that standards are met while making compliance easy and accessible to all. Coherent and transparent rules, efficient processes and adequate allocation of resources are especially important in sectors where safety is at stake. Construction is one of them. In an effort to ensure

building safety while keeping compliance costs reasonable, governments around the world have worked on consolidating permitting requirements. What construction permitting reforms has *Doing Business* recorded in Kazakhstan (table 3.1)?

Table 3.1 How has Kazakhstan made dealing with construction permits easier—or not? By *Doing Business* report year

| DB year | Reform |
|---------|--|
| DB2009 | No reform as measured by Doing Business. |
| DB2010 | Kazakhstan eased the process of dealing with construction permits by eliminating the requirement to pay for new electrical connection, reduced the time-limits for building permits, and reduced cost to obtain topographic surveys. |
| DB2011 | Kazakhstan made dealing with construction permits easier by implementing a one-stop shop related to technical conditions for utilities. |
| DB2012 | No reform as measured by Doing Business. |
| DB2013 | No reform as measured by Doing Business. |
| DB2014 | No reform as measured by Doing Business. |

Note: For information on reforms in earlier years (back to DB2006), see the *Doing Business* reports for these years, available at http://www.doingbusiness.org.

Source: Doing Business database.

What are the details?

The indicators reported here for Kazakhstan are based on a set of specific procedures—the steps that a company must complete to legally build a warehouse—identified by *Doing Business* through information collected from experts in construction licensing, including architects, civil engineers, construction lawyers, construction firms, utility service providers and public officials who deal with building regulations. These procedures are those that apply to a company and structure matching the standard assumptions used by *Doing Business* in collecting the data (see the section in this chapter on what the indicators cover).

BUILDING A WAREHOUSE City: Almaty

Estimated
Warehouse Value:

KZT 61,748,704

The procedures, along with the associated time and cost, are summarized below.

Summary of procedures for dealing with construction permits in Kazakhstan —and the time and cost

| No. | Procedure | Time to complete | Cost to complete |
|-----|--|------------------|------------------|
| 1 | Request and obtain land allocation permit from Almaty City Akimat BuildCo applies to City Akimat to obtain the Decision of Mayor of City of Almaty. The Decision gives the right to design the project for the next 12 months on the specified land. Resolution of Government of Kazakhstan N 425 as of May 6, 2008 provides for a new "Rule of issuance of baseline materials and data for designing of new construction". According to this Rule all local municipalities must issue the location permit for small and medium companies within 10 days and for large scale companies within 30 days. However, the Akimat of Almaty continues to issue the location permit regardless of size of companies in 30 days. In some cases in practice this procedure may end up taking up to 12 months. | 10 days | no charge |
| 2 | * Notarize documents BuildCo provides a copy of the following four documents totaling seven pages: Governmental registration certificate (double sided) Statistical card (single sided) Taxpayer registration number (double sided) The deed of ownership of land (two pages) This procedure is required when applicants do not have all the original documents. In case applicants have the original of all documents, they can submit their documents without notarization and can show them for verification. Notarizations may be carried out by private notaries or state notaries. | 1 day | KZT 1,212 |

| No. | Procedure | Time to complete | Cost to complete |
|-----|--|------------------|------------------|
| | The fees of both private notaries and state notaries are calculated with reference to a monthly calculation index (MCI) which is established by Parliament for each year in the national budget. The MCI for 2013 is equal to KZT 1,731.00. State notaries charge 10% of the MCI for each side of a page to be notarized. Thus, for 7 pages the charge is KZT 1211.70 (10% of 1,731.00 X 7). The fees for private notaries in Almaty were established at 20% of MCI at a meeting of the private notaries on January 31, 2008. It is most likely that companies will opt for public notaries since it is cheaper. Notarization is completed in a day. | complete | |
| 3 | Request and obtain architectural planning Assignment (APZ) and technical conditions for utility connections To obtain an architectural-planning assignment, the company must submit a business plan and project feasibility study to the city architecture department. The application must include any plans for construction, a description of the business activities to take place on site, and estimated utility hook-up and consumption requirements. In addition, the company must submit a copy of the property title along with the plot document, approval of engineering-geological estimation of the plot, and company registration documents The architectural-planning assignment is a permit to develop a building plan/design/project. The design estimates are valid for 3 years from the date of its approval. It includes some provisions and requirements that must be taken into account while developing the project and building, in particular, the requirement that an opinion be obtained on the project from the seismological agency and the sanitary and epidemiologic authorities, as well as project appraisal, and so forth. After obtaining the architectural-planning assignment, the company should develop a project (design) and must then obtain several agencies' approvals of the project in accordance with the architectural-planning assignment and the applicable laws. Each of these agencies reviews the application documents and the project, and may physically inspect the land. As a prerequisite to signing the permit, each department signs a technical approval or "contract" with the company. The contract often requires the signatures of several officers in a department. The contract indicates the department's approval of the company's technical proposals and sets forth the responsibilities of the investor to abide by the terms and conditions of the approval. As of May 6, 2008 Government Resolution N 425 approved new "Rule of issuance of baseline materials and data for designing of new construction". According to it the architectural- | 30 days | no charge |

| No. | Procedure | Time to complete | Cost to complete |
|-----|--|------------------|------------------|
| | conditions issued by the utility providers, the Almaty City Architecture and Town-Planning Department issues an architectural-planning assignment, which serves as the authorization to start the development of the project from the design organizations. The applicable law is the Law on Architectural, City Planning, and Construction Activity in the Republic of Kazakhstan," Law No. 232-II, dated July 16, 2001. On September 29, 2009 amendments were adopted to the regulation approved by the above mentioned Government Resolution No. 425, dated May 6, 2008. Pursuant to these amendments: 1. architectural-planning assignment (APZ) and technical conditions for the connection to sources of engineering and municipal utilities (Technical Conditions) are issued by local Akimat; 2. in order to obtain APZ and Technical Conditions BuildCo will have to submit to Akimat of Almaty City an application which must include (i) permit to use the land plot for the construction of a warehouse and (ii) assignement for construction approved by BuildCo; 3. local Akimat is required not later than on the next day following the receipt of an application to forward the request for Technical Conditions to the appropriate utilities providers, and 4. utilities providers are required to provide the Technical Conditions or, in case of refusal, the motivated explanation of the refusal. The term for the consideration and issue of APZ and Technical Conditions by local Akimat may not exceed 8 business days, except for certain construction projects specified in the regulation where the relevant term may be not more than 15 business days from the date of the application. | | |
| 4 | * Hire a topographic specialist and obtain topographic plan Topographical surveying of land is a licensed activity (complex procedure) performed by very few companies. As of January 2009 due to severe construction crisis in Kazakhstan's financial capital Almaty, and decline in demand, topographic surveying companies have reduced their prices. Cost per hectare of conducting a topographic survey now can range anywhere between KZT 9,000.00 to KZT 20,000.00. This is a significant jump from previous cost of KZT 33,000.00 to KZT 95,000.00. | 1 day | KZT 14,500 |
| 5 | * Receive on-site inspection This inspection happens parallel to the issuance of Architectural Planning Assignment. | 1 day | no charge |
| 6 | * Request and obtain project clearance from Sanitation and Epidemiological Authority (SES) According to Law on Radiological Safety of Population N 219-I as of April 23, 1998 and other by-laws the Sanitation and Epidemiologic Authority (SES) examines the construction projects for their compliance with state radiological, sanitary and hygienic regulations. No specific time limit is expressly provided by law for this procedure. However, according to practice it takes 1 3 months. The SES will conduct an inspection to undertake a radiological measurement. The approval is | 30 days | KZT 30,000 |

| No. | Procedure | Time to complete | Cost to complete |
|-----|---|------------------|------------------|
| | obtained after the fee is paid. The fee is based on various factors is approximately KZT 30,000.00. | | |
| | * Request and obtain approval from local fire department | | |
| 7 | This procedure is regulated by the Government Resolution No. 48, as of January 24, 2005 "On approval of the Rules of obtaining approval on projects standards, regulations and rules established requirements of fire protection on construction objects". The Fire Service Department issues the project clearance to ensure that fire norms have been adequately met in the project design. Comments for revision or endorsement are also issued. There is no time-limit stipulated for this procedure and it can take up to 1 month. Any subsequent consideration would take 15 days. | 21 days | no charge |
| | * Request and obtain approval from water authority | | |
| 8 | It is the responsibility of the State Expertise Authority to issue the technical conditions for connection to water, heat, and electricity, under the Governmental Decree on the Order of Conducting State Expertise, Decree No. 918, dated August 19, 2002 (with changes and amendments dated July 7, 2006). Yet companies have to consult with the water and sewage company. No on-site inspection is required by law; however, in practice, inspections take place. The water and sewage company examines the submitted project of devices and constructions for the connection and issues its conclusion on it. With inspection this procedure may take 30 days. The state act which regulated specified provision (Instructions for use of municipal water pipe and sewage in cities and settlements of Republic Kazakhstan, adopted by The Order of the Ministry of Economy and Trade of Republic Kazakhstan #80, May 30, 1997) was not registered by Ministry of Justice and has no legal effect but yet is continued to be used. | 24 days | no charge |
| | * Request and obtain environmental expertise of documentation | | |
| 9 | In accordance with the Article 50 of Ecological Code RK No 212-III January 9, 2007 the time for getting approval of local Environment Protection Authority can't be more than 3 months. Subjects of environmental expertise are divided into 4 categories depending on the hazard class of the facility to be inspected pursuant to the sanitary classification. The environmental expertise with respect to facilities of the 2nd, 3rd and 4th categories is performed by the Akimats of Almaty City. A warehouse falls under the 4th category. | 25 days | no charge |
| | Once the documents are provided for the environmental expertise, the Agency conducts the preliminary examination of the submitted documents as to their completeness and compliance with the legal requirements. The term for the preliminary examination of documents may not exceed 2 weeks from the date of submission of documents. | | |

| No. | Procedure | Time to complete | Cost to complete |
|-----|--|------------------|------------------|
| | Once the preliminary examination of documents is completed, the environmental expertise is performed which term may not exceed 3 months. | | |
| 10 | * Request and obtain opinion of the seismological agency on the project from Republican Enterprise Kazakhstan Scientific Institute "Kaz NIISA" Republican Enterprise Kazakhstan Scientific Institute (Kaz NIISA) carries out the seismological survey, required for areas subject to dangerous levels of seismic activity. The only document required is the project design. A specialist makes a field visit, reviews the project design documents, and issues a finding that is attached to the project. The minimum time it takes is 10 days and may cost anywhere from KZT 10,000.00 to KZT 100,000.00. | 16 days | KZT 10,000 |
| 11 | Request and obtain expert examination of project documentation With limited exceptions provided by law, all projects must undergo expert examination to ascertain if the project conforms to the numerous constructions standards. What might be called state expertise is conducted by Republican State Enterprise "Gosekspertiza" which is authorized by the Government to conduct expertise of state-related projects, projects of high technical complexity, social, transport and recreational infrastructure projects. The projects will be subject to expertise on compliance with regulations on frame stability, frame functioning stability, and labor conditions and protection. In essence, the project is checked against numerous construction standards (SNIPs). Subject to the limited exceptions, the expertise for all other projects may be performed by any duly licensed expert specialist or non-governmental expert organization. The cost and time for performance of services by private expert individuals or organizations are not established by law and will be subject to negotiation and the circumstances of each project. The cost will be 247.00 x 1300.6 sq. m. = KZT 321,248.00. On October 23, 2009 the Government Resolution No. 1656 established the criteria for determining whether a facility is of high or low technical complexity. According to this regulation, free-standing warehouses which do not require special conditions for the storage of goods are considered to be facilities of low technical complexity. The expert examination of the warehouse construction project be handled by Gosekspertiza, it should not take more than 15 calendar days. If the project is sent to Gosexpertiza the official time limit is 45 days. If the project is complex it may be extended to 60 days and for technically simple projects of small business time should not exceed 15 days. | 15 days | KZT 321,248 |

| No. | Procedure | Time to complete | Cost to complete |
|-----|--|------------------|------------------|
| 12 | Request and obtain Project Clearance from the local architecture and town-planning authorities Project clearance from the local architecture and town-planning authorities involves verifying the project's conformity with the architectural-planning assignment and with the set of technical conditions. The following documents should be submitted: • An application to the Architecture and Town-Planning Department Chief Executive • The architectural-planning assignment • Documentation confirming the title to the land • Topographical survey • Approvals and opinions of the seismological, fire, sanitary-and-epidemiologic, and environmental agencies • Independent or state experts' examinations; licenses of the developer and the expert organization, and so forth | 30 days | no charge |
| 13 | Notify the Architecture and Construction Control Department of Almaty about the start of construction BuildCo has to notify the Department of Architecture within 10 business days prior to the start of construction works. The following documents should be attached to the notification: 1) Proof of land ownership 2) Construction licences 3) Licenses of individuals assigned to perform technical supervision onsite 4) Positive conclusion of the State Expertise | 1 day | no charge |
| 14 | Receive inspection by Sanitary and Epidemiology Service - I The SES will inspect the site during construction. The inspector issues an inspection report identifying any irregularities and may return to verify that adequate changes have been made. In addition to that SES will charge KZT 3,000.00 for radiological measurement. | 1 day | KZT 3,000 |
| 15 | Receive inspection by the Fire Service - II The Fire Service may inspect the site one or two times during construction. The inspector issues an inspection report identifying any irregularities and may return to verify that adequate changes have been made. Administrative fines could be imposed if mistakes are found. The applicable law is the Law on Architectural, City Planning, and Construction Activity in the Republic of Kazakhstan, Law No. 242-II, dated July 16, 2001; and the Governmental Decree Confirming the Rules of Obtaining Approval Procedures for Construction of New and Reconstruction of Existing Buildings, Decree No. 1313, dated December 13, 2002. | 1 day | no charge |

| No. | Procedure | Time to complete | Cost to complete |
|-----|---|------------------|------------------|
| 16 | Receive inspection by the Social Protection - III | 1 day | no charge |
| 17 | Receive an inspection by the Almaty City Department of Architecture and Town-Planning Control after foundation works-IV BuildCo may receive inspections from the Almaty City Department on Architecture and Town-Planning Control at various stages of the construction process: laying the foundation, finishing the first floor, roofing, and so forth. The inspector issues an inspection report identifying any irregularities and may return to verify that adequate changes have been made. Administrative fines could be imposed if mistakes are found. The building control agency does not require prior request of inspection. The applicable law is the Law of the Republic of Kazakhstan on Architectural, City Planning, and Construction Activity in the Republic of Kazakhstan, Law No. 242-11, dated July 16, 2001. In practice there may be more inspections. | 1 day | no charge |
| 18 | Receive inspection by Almaty City Department of Architecture and Town-Planning Control after floor works - V BuildCo receives an inspection from the Almaty City Department on Architecture and Town-Planning Control at various stages of the construction process: laying the foundation, finishing the first floor, roofing, and so forth. The inspector issues an inspection report identifying any irregularities and may return to verify that adequate changes have been made. Administrative fines could be imposed if mistakes are found. The building control agency does not require prior request of inspection. The applicable law is the Law of the Republic of Kazakhstan on Architectural, City Planning, and Construction Activity in the Republic of Kazakhstan, Law No. 242-11, dated July 16, 2001. | 1 day | no charge |
| 19 | Receive inspection by Almaty City Department of Architecture and Town-Planning Control after roof works - VI BuildCo receives an inspection from the Almaty City Department on Architecture and Town-Planning Control at various stages of the construction process: laying the foundation, finishing the first floor, roofing, and so forth. The inspector issues an inspection report identifying any irregularities and may return to verify that adequate changes have been made. Administrative fines could be imposed if mistakes are found. The building control agency does not require prior request of inspection. The applicable law is the Law of the Republic of Kazakhstan on Architectural, City Planning, and Construction Activity in the Republic of Kazakhstan, Law No. 242-11, dated July 16, 2001. | 1 day | no charge |

| No. | Procedure | Time to complete | Cost to complete |
|-----|--|------------------|------------------|
| 20 | Hire Construction Technology Supervision Company A licensed construction engineering supervision company carries out the technical process of checking the different stages of the building. BuildCo is unlikely to have a license for this area of expertise. Such activities do not replace the inspections mentioned above but occur in parallel to them. The average price is USD 3 6 dollars per square meter, and may depend on the complexity of construction. | 1 day | USD 5,202 |
| 21 | * Receive inspection from water authorities | 1 day | no charge |
| 22 | * Connect to water services | 6 days | no charge |
| 23 | * Request and obtain telephone connection The connection fee for fixed telephone line services by Kazakhtelecom was reduced in 2009 from KZT 36,800.00 to KZT 26,800.00. | 3 days | KZT 26,800 |
| 24 | Request acceptance of the building from the Acceptance Commission After the Working Commission, the Acceptance Commission will inspect the building. The approval is signed by all members of the Commission: construction authority, city office of the land agency, city department of sanitation, city fire department, state agency for construction control, local water company, local electric company, and Kazakh Telecom, and then sent it to the Akimat for approval. If the building has been built according to specifications, the inspections take 1 2 days. The SES will inspect the building along with other authorities but a separate application must be filed. It may come together with others or on a separate day to undertake a final radiological measurement. The cost for that is KZT 6,000.00. If not followed up it may take 1 3 months. The approval from the SES is pre-requisite to obtain the approval of Acceptance Commission. | 1 day | KZT 34,844 |
| 25 | Receive inspection by the Acceptance Commission The Acceptance Commission may inspect the building. The approval is signed by all members of the commission and then sent to the Akimat for approval. If the building has been built according to specifications, the inspections will take 1 2 days. | 1 day | no charge |

Kazakhstan

| No. | Procedure | Time to complete | Cost to complete |
|-----|--|------------------|------------------|
| 26 | Obtain approval of Acceptance Commission Once the Act of Acceptance Commission is signed it needs to be endorsed by amity City Akim. | 20 days | no charge |
| 27 | Obtain a technical passport Before registering the building with the real property registry, it is required to obtain a "technical passport". | 30 days | KZT 800 |
| 28 | * Receive inspection for the technical passport | 1 day | KZT 26,800 |
| 29 | Register BuildCo's right to the warehouse Time: 15 business days if the building is registered in the usual order, and 2 business days if it is registered in an accelerated procedure. Cost: KZT 17,310 if the building is registered in the usual order, and KZT 51,930.00 if it is registered in an accelerated procedure. BuildCo must register the building with the Department of Justice at the place of location of the warehouse. Amendments were made to the Kazakhstan Law on State Registration of Immovable Property and Transactions Related in 2008, which provide for both usual and accelerated registration. The standard term for the registration in the usual order is 15 business days, and for the accelerated registration 2 business days. The registration fees are calculated on the basis of MCI which is for 2013 year is equal to KZT 1,731. The registration fee for the registration performed in the usual order is 10 MCI = KZT 17,310.00, and for the accelerated registration - 30 MCI = KZT 51,930.00. The documents to be submitted include an application, legal documents proving ownership, payment receipt, identification or legal entity registration certificate, charter, decision of the Akimat approving the building for use, the act of the state commission on approval for use, and so forth. An officer of the Registration Service Committee accepts the documents and issues a receipt that lists the documents received and indicates date and time the documents were received. | 2 days | KZT 51,930 |

^{*} Takes place simultaneously with another procedure.

Note: Online procedures account for 0.5 days in the total time calculation.

Access to reliable and affordable electricity is vital for businesses. To counter weak electricity supply, many firms in developing economies have to rely on self-supply, often at a prohibitively high cost. Whether electricity is reliably available or not, the first step for a customer is always to gain access by obtaining a connection.

What do the indicators cover?

Doing Business records all procedures required for a local business to obtain a permanent electricity connection and supply for a standardized warehouse, as well as the time and cost to complete them. These procedures include applications and contracts with electricity utilities, clearances from other agencies and the external and final connection works. The ranking on the ease of getting electricity is the simple average of the percentile rankings on its component indicators: procedures, time and cost. To make the data comparable across economies, assumptions are used.

The warehouse:

- Is located in the economy's largest business city, in an area where other warehouses are located.
- Is not in a special economic zone where the connection would be eligible for subsidization or faster service.
- Has road access. The connection works involve the crossing of a road or roads but are carried out on public land.
- Is a new construction being connected to electricity for the first time.
- Has 2 stories, both above ground, with a total surface of about 1,300.6 square meters (14,000 square feet), and is built on a plot of 929 square meters (10,000 square feet).

The electricity connection:

 Is 150 meters long and is a 3-phase, 4-wire Y, 140-kilovolt-ampere (kVA) (subscribed capacity) connection.

WHAT THE GETTING ELECTRICITY INDICATORS MEASURE

Procedures to obtain an electricity connection (number)

Submitting all relevant documents and obtaining all necessary clearances and permits

Completing all required notifications and receiving all necessary inspections

Obtaining external installation works and possibly purchasing material for these works

Concluding any necessary supply contract and obtaining final supply

Time required to complete each procedure (calendar days)

Is at least 1 calendar day

Each procedure starts on a separate day

Does not include time spent gathering information

Reflects the time spent in practice, with little follow-up and no prior contact with officials

Cost required to complete each procedure (% of income per capita)

Official costs only, no bribes

Excludes value added tax

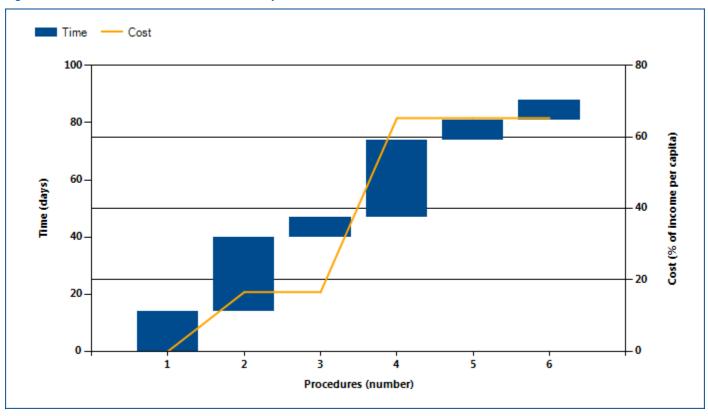

- Is to either the low-voltage or the mediumvoltage distribution network and either overhead or underground, whichever is more common in the economy and area where the warehouse is located. The length of any connection in the customer's private domain is negligible.
- Requires crossing of a 10-meter road but all the works are carried out in a public land, so there is no crossing into other people's private property.
- Involves installing one electricity meter. The monthly electricity consumption will be 0.07 gigawatt-hour (GWh). The internal electrical wiring has been completed.

Where does the economy stand today?

What does it take to obtain a new electricity connection in Kazakhstan? According to data collected by *Doing Business*, getting electricity there requires 6

procedures, takes 88 days and costs 65.3% of income per capita (figure 4.1).

Figure 4.1 What it takes to obtain an electricity connection in Kazakhstan

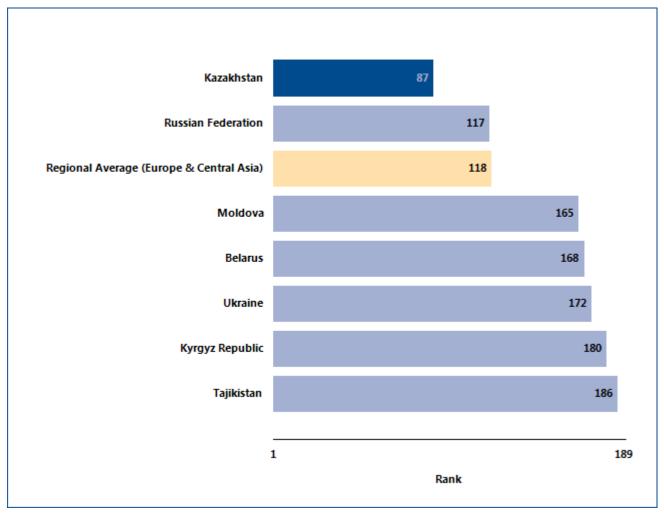

Note: Time shown in the figure above may not reflect simultaneity of procedures. For more information on the methodology of the getting electricity indicators, see the *Doing Business* website (http://www.doingbusiness.org). For details on the procedures reflected here, see the summary at the end of this chapter.

Source: Doing Business database.

Globally, Kazakhstan stands at 87 in the ranking of 189 economies on the ease of getting electricity (figure 4.2). The rankings for comparator economies and the

regional average ranking provide another perspective in assessing how easy it is for an entrepreneur in Kazakhstan to connect a warehouse to electricity.

Figure 4.2 How Kazakhstan and comparator economies rank on the ease of getting electricity

Even more helpful than rankings on the ease of getting electricity may be the indicators underlying those rankings (table 4.1). And regional and global best

performers on these indicators may provide useful benchmarks.

Table 4.1 The ease of getting electricity in Kazakhstan

| Indicator | Kazakhstan DB2014 | Kazakhstan DB2013 | Best performer in Europe & Central Asia DB2014 | Best performer globally DB2014 |

| Rank | 87 | 85 | San Marino (10) | Iceland (1) |
| Procedures (number) | 6 | 6 | San Marino (3) | 10 Economies* (3) |
| Time (days) | 88 | 88 | San Marino (45) | Germany (17) |
| Cost (% of income per capita) | 65.3 | 71.1 | Lithuania (48.1) | Japan (0.0) |

Note: DB2013 rankings shown are not last year's published rankings but comparable rankings for DB2013 that capture the effects of such factors as data corrections and the addition of 4 economies (Libya, Myanmar, San Marino and South Sudan) to the sample this year.

^{*} Two or more economies share the top ranking on this indicator. For a list of these economies, see the *Doing Business* website (http://www.doingbusiness.org).

Obtaining an electricity connection is essential to enable a business to conduct its most basic operations. In many economies the connection process is complicated by the multiple laws and regulations involved—covering service quality, general safety, technical standards, procurement practices and internal wiring installations. In an effort to ensure

safety in the connection process while keeping connection costs reasonable, governments around the world have worked to consolidate requirements for obtaining an electricity connection. What reforms in getting electricity has *Doing Business* recorded in Kazakhstan (table 4.2)?

Table 4.2 How has Kazakhstan made getting electricity easier—or not? By *Doing Business* report year

| DB year | Reform |
|---------|--|
| DB2012 | No reform as measured by Doing Business. |
| DB2013 | No reform as measured by Doing Business. |
| DB2014 | No reform as measured by Doing Business. |

What are the details?

The indicators reported here for Kazakhstan are based on a set of specific procedures—the steps that an entrepreneur must complete to get a warehouse connected to electricity by the local distribution utility—identified by *Doing Business*. Data are collected from the distribution utility, then completed and verified by electricity regulatory agencies and independent professionals such as electrical engineers, electrical contractors and construction companies. The electricity distribution utility surveyed is the one serving the area (or areas) in which warehouses are located. If there is a choice of distribution utilities, the one serving the largest number of customers is selected.

| OBTAINING AN ELECTRICITY CONNECTION | | | | |
|-------------------------------------|---------------|--|--|--|
| City: | Almaty | | | |
| Name of Utility: | Alatau Zharvk | | | |

The procedures are those that apply to a warehouse and electricity connection matching the standard assumptions used by *Doing Business* in collecting the data (see the section in this chapter on what the indicators cover). The procedures, along with the associated time and cost, are summarized below.

Summary of procedures for getting electricity in Kazakhstan—and the time and cost

| No. | Procedure | Time to complete | Cost to complete |
|-----|---|------------------|------------------|
| | Submit an application for an electricity connection to the Department of Architecture and Urban Planning and await technical conditions The customer submits an application for the electricity connection/technical conditions to Almaty Urban Planning and Architecture Department and awaits issuance of technical conditions. The technical conditions for electricity are received together with | | |
| 1 | technical conditions from other utilities (water, gas, etc.). With the application the customer must submit the following documents: Application for technical conditions, Documents on property rights, identification documents, calculation of the required load, topographic map/survey. The specifications in technical conditions among other things define the capacity of the existing electricity facilities in the geographic location where the customer's warehouse is located and specify which substation or which point in the network is allocated for the customer. | 14 calendar days | no charge |
| 2 | Await completion and coordination of the electrical project design by a private electrical design firm and its approval After the technical conditions are issued the customer hires a private project design company to prepare a project design of the external connection and if not available at this point a topographic plan of the location of the warehouse. The same company on behalf of the | 26 calendar days | KZT 255,000.0 |

| No. | Procedure | Time to complete | Cost to complete |
|-----|---|------------------|------------------|
| | customer obtains an approval of the project at multiple organizations. The time recorded for this procedure includes time for the preparation of the project and its coordination/approval. | | |
| 3 | Obtain an excavation permit at the Department of Architectural and Urban Planning Supervision in the city of Almaty and Almaty region The excavation permit is obtained by the electrical contractor. | 7 calendar days | no charge |
| 4 | Await completion of the external connection works by an electrical contractor After the electrical design is prepared specially licensed electrical installation company is hired to complete the external connection works. The meter is installed by the same electrical contractor. After the external connection works are over all the installations and the cable have to be tested. The private company carrying out the external connection works has to issue a certificate of completion of works and clear a number of various technical documents (about 28) with various agencies. | 27 calendar days | KZT 750,000.0 |
| 5 | Await and obtain inspection of the external connection works by Alatau Zharyk and other members of the acceptance committee The electrical contractor on behalf of the customer submits a written request for the inspection of the completed external connection works. The works must be approved by an acceptance committee (members of the committee include: Alatau Zharyk, Committee on State Energy Supervision, Customer, electrical contractor). | 7 calendar days | no charge |
| 6 | Conclude a supply contract with supply company and await for the meter to be sealed by Alatau Zharyk According to the Law "On Electric Power Industry of the Republic of Kazakhstan" the electricity supply contract is concluded with the supply company "AlmatyEnergoSbyt." After signing the contract, "AlmatyEnergoSbyt" directly notifies the distribution utility "Alatau Zharyk" without interacting with the client. Once Alatau Zharyk receives an application for sealing the meter, its representative visits the building site within 2 days to seal the meter. | 7 calendar days | no charge |

^{*} Takes place simultaneously with another procedure.

Ensuring formal property rights is fundamental. Effective administration of land is part of that. If formal property transfer is too costly or complicated, formal titles might go informal again. And where property is informal or poorly administered, it has little chance of being accepted as collateral for loans—limiting access to finance.

What do the indicators cover?

Doing Business records the full sequence of procedures necessary for a business to purchase property from another business and transfer the property title to the buyer's name. The transaction is considered complete when it is opposable to third parties and when the buyer can use the property, use it as collateral for a bank loan or resell it. The ranking on the ease of registering property is the simple average of the percentile rankings on its component indicators: procedures, time and cost.

To make the data comparable across economies, several assumptions about the parties to the transaction, the property and the procedures are used.

The parties (buyer and seller):

- Are limited liability companies, 100% domestically and privately owned.
- Are located in the economy's largest business city.
- Have 50 employees each, all of whom are nationals.
- Perform general commercial activities.

The property (fully owned by the seller):

- Has a value of 50 times income per capita. The sale price equals the value.
- Is registered in the land registry or cadastre, or both, and is free of title disputes.
- Is located in a periurban commercial zone,

WHAT THE REGISTERING PROPERTY

INDICATORS MEASURE

Procedures to legally transfer title on immovable property (number)

Preregistration (for example, checking for liens, notarizing sales agreement, paying property transfer taxes)

Registration in the economy's largest business city

Postregistration (for example, filing title with the municipality)

Time required to complete each procedure (calendar days)

Does not include time spent gathering information

Each procedure starts on a separate day. Procedures that can be fully completed online are an exception to this rule.

Procedure considered completed once final document is received

No prior contact with officials

Cost required to complete each procedure (% of property value)

Official costs only, no bribes

No value added or capital gains taxes included

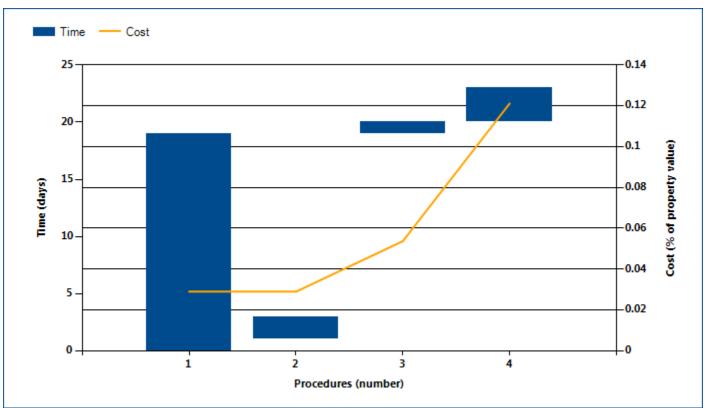

and no rezoning is required.

- Has no mortgages attached and has been under the same ownership for the past 10 years.
- Consists of 557.4 square meters (6,000 square feet) of land and a 10-year-old, 2-story warehouse of 929 square meters (10,000 square feet). The warehouse is in good condition and complies with all safety standards, building codes and legal requirements. There is no heating system. The property will be transferred in its entirety.

Where does the economy stand today?

What does it take to complete a property transfer in Kazakhstan? According to data collected by Doing Business, registering property there requires 4 procedures, takes 23.0 days and costs 0.1% of the property value (figure 5.1).

Figure 5.1 What it takes to register property in Kazakhstan

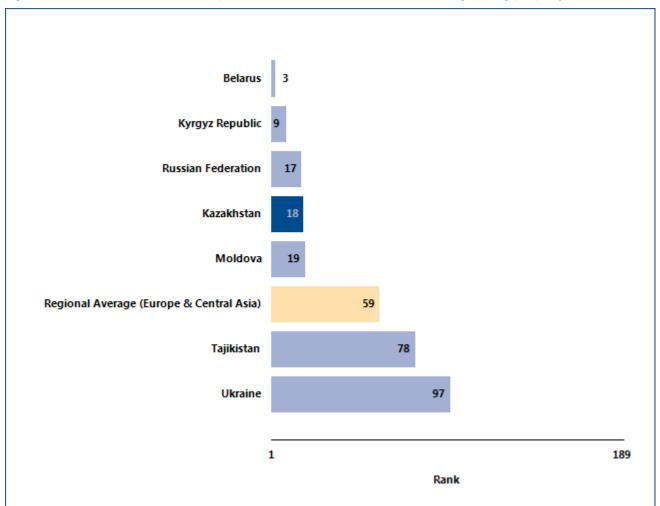

Note: Time shown in the figure above may not reflect simultaneity of procedures. Online procedures account for 0.5 days in the total time calculation. For more information on the methodology of the registering property indicators, see the Doing Business website (http://www.doingbusiness.org). For details on the procedures reflected here, see the summary at the end of this chapter.

Globally, Kazakhstan stands at 18 in the ranking of 189 economies on the ease of registering property (figure 5.2). The rankings for comparator economies and the

regional average ranking provide other useful information for assessing how easy it is for an entrepreneur in Kazakhstan to transfer property.

Figure 5.2 How Kazakhstan and comparator economies rank on the ease of registering property

What are the changes over time?

The benchmarks provided by the economies that over time have had the best performance regionally or globally on the procedures, time or cost required to complete a property transfer (figure 5.3) help show

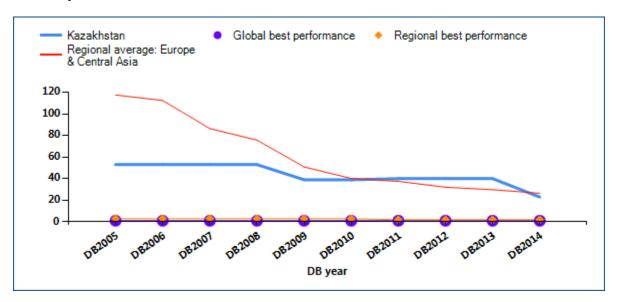

what is possible in making it easier to register property. And changes in regional averages can show where Kazakhstan is keeping up—and where it is falling behind.

Figure 5.3 Has registering property become easier over time?

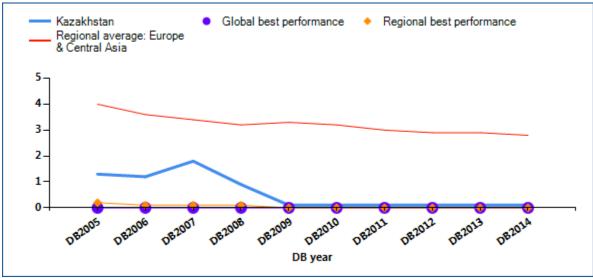

Procedures (number)

Time (days)

Cost (% of property value)

Note: DB2013 rankings shown are not last year's published rankings but comparable rankings for DB2013 that capture the effects of such factors as data corrections and the addition of 4 economies (Libya, Myanmar, San Marino and South Sudan) to the sample this year. For more information on "no practice" marks, see the data notes.

Economies worldwide have been making it easier for entrepreneurs to register and transfer property—such as by computerizing land registries, introducing time limits for procedures and setting low fixed fees. Many have cut the time required substantially—enabling buyers to use or mortgage their property earlier. What property registration reforms has *Doing Business* recorded in Kazakhstan (table 5.1)?

Table 5.1 How has Kazakhstan made registering property easier—or not? By *Doing Business* report year

| DB year | Reform |
|---------|---|
| DB2009 | The new Law on State Registration created a new unified registry for all lands and buildings and introduced Public Service Centres as competent authorities for property transactions in the country. The law has eliminated a number of previous requirements and the number of procedures went down from 8 to 5, while time went down from 52 to 40 days. |
| DB2010 | No reform as measured by Doing Business. |
| DB2011 | No reform as measured by Doing Business. |
| DB2012 | No reform as measured by Doing Business. |
| DB2013 | No reform as measured by Doing Business. |
| DB2014 | Kazakhstan made transferring property easier by introducing a fast-track procedure for property registration. |

Note: For information on reforms in earlier years (back to DB2005), see the *Doing Business* reports for these years, available at http://www.doingbusiness.org.

What are the details?

The indicators reported here are based on a set of specific procedures—the steps that a buyer and seller must complete to transfer the property to the buyer's name—identified by *Doing Business* through information collected from local property lawyers, notaries and property registries. These procedures are those that apply to a transaction matching the standard assumptions used by *Doing Business* in collecting the data (see the section in this chapter on what the indicators cover).

| STANDARD PROPERTY TRANSFER | | | | |
|----------------------------|----------------|--|--|--|
| City: | Almaty | | | |
| Property Value: | KZT 76,992,015 | | | |

The procedures, along with the associated time and cost, are summarized below.

Summary of procedures for registering property in Kazakhstan—and the time and cost

| No. | Procedure | Time to complete | Cost to complete |
|-----|--|--|---|
| 1 | * Obtain the technical passport for the property According to the Decree of the Government of the Republic of Kazakhstan, No. 2121 approving Standards of State Service "Issuance of Technical Passport of Real Estate Objects" dated December 15, 2009, the technical passport is issued by the Center for Real Estate or Population Service Centers. The detailed procedure is provided at www.minjust.kz. Accordingly, the technical passport for immovable property with an area up to one thousand (1,000) sq.m. is provided within fifteen (15) working days and for immobale property with an area over one thousand (1,000) sq.m within one month (day of application and issuance are not included in the above term). | 17-21 days (simultaneous with Procedure 2) | Total cost is: KZT 22,327.836 where the basic fee KZT 4,413 is charged for the technical inspection, KZT 3,338.826 - for inspection of the land with total area of 557.4 sq.m. (cost: KZT 5.99/sq.m.), and KZT 14,576.01 - for inspection of the non-industrial warehouse with total area of 929 sq.m. (cost: KZT 15.69/sq.m.). |
| | * Obtain the non-encumbrance certificate | | |
| 2 | According to the Decree of the Government of the Republic of Kazakhstan, No. 2121 dated December 15, 2009 approving Standards of the State Service "Issuance of Cerificates on Registered Rights (Encumbrances) to Immovable Property and its Technical Characteristsics", the non-encumbrance certificate is issued by Population Service Centers. The non-encumbrance certificate is issued | 1-2 days (simultaneous with Procedure 1) | no cost |

| No. | Procedure | Time to complete | Cost to complete |
|-----|--|--|--|
| | within 3-5 days and is free of change. There is also an online oprtion available to obtain electronic version of the certificate from www.e-gov.kz | | |
| 3 | Notarization of seller's and buyer's incorporation documents and the sale-purchase agreement According to the Article 536, paragraph 1 of the Tax Code No.99-IV dated December 10, 2008, which came into effect January 1, 2009, if at least one of the parties entering into a sale and purchase agreement is a legal entity, notarization of the transaction shall cost one thousand (1,000) percent of the monthly calculation index (MCI). The law of the Republic of Kazakhstan "On National Buget for 2013-2015" No. 54-V dated 23 November 2013 (the "Law on Budget") set a new monthly assessment index ("MAI") in amount of KZT 1,731 effective from 1 January 2013. By the Law on Budget the notary fee for the certification of sale-purchase agreement amounts to KZT 17,310 and fee for certification of each page of the corporate documents costs KZT 173.1 per page. | 1 day | KZT 17,310+ KZT 173.1 for certification of each page of corporate documents |
| 4 | Registration of a title at the Registration Service Committee The Law Amending Legal Acts of the Republic of Kazakhstan on Taxation on November 12, 2008 established new statutory time limit of 15 working days for the regular procedure and 2 days for the expedited procedure. Other business centers take 7 days for expedited procedures. The cost of registration of non-residential premises (both the regular and expedited procedures) depends on the number of buildings located on the land plot being bought: 1 building - 10 x Monthly Index (1,731 for 2012) = KZT 17,310 2-5 buildings - 15 x Monthly Index = KZT 25,965 6-10 buildings - 20 x Monthly Index = KZT 34,620 The documentation shall include: - a filled in standard application form; - 2 original copies of the notarized sale-purchase agreement (obtained in Procedure 3); - Non-encumbrance certificate (obtained in Procedure 1); - Technical passport of the property (obtained in Procedure 2). | 15 working days (regular) and 2 days (expedited) | KZT 17,310 = 10 times the monthly calculation index (regular procedure) or 30 MCI, i.e. 51,930 (expedited) |

^{*} Takes place simultaneously with another procedure.

Note: Online procedures account for 0.5 days in the total time calculation.

Two types of frameworks can facilitate access to credit and improve its allocation: credit information systems and borrowers and lenders in collateral and bankruptcy laws. Credit information systems enable lenders' rights to view a potential borrower's financial history (positive or negative)—valuable information to consider when assessing risk. And they permit borrowers to establish a good credit history that will allow easier access to credit. Sound collateral laws enable businesses to use their assets, especially movable property, as security to generate capital—while strong creditors' rights have been associated with higher ratios of private sector credit to GDP.

What do the indicators cover?

Doing Business assesses the sharing of credit information and the legal rights of borrowers and lenders with respect to secured transactions through 2 sets of indicators. The depth of credit information index measures rules and practices affecting the coverage, scope and accessibility of credit information available through a public credit registry or a private credit bureau. The strength of legal rights index measures whether certain features that facilitate lending exist within the applicable collateral and bankruptcy laws. Doing Business uses case scenarios to determine the scope of the secured transactions system, involving a secured borrower and a secured lender and examining legal restrictions on the use of movable collateral. These scenarios assume that the borrower:

- Is a private, incorporated, limited liability company.
- Has its headquarters and only base of operations in the largest business city.

WHAT THE GETTING CREDIT INDICATORS

MEASURE

Strength of legal rights index (0-10)

Rights of borrowers and lenders through collateral laws

Protection of secured creditors' rights through bankruptcy laws

Depth of credit information index (0-6)

Scope and accessibility of credit information distributed by public credit registries and private credit bureaus

Public credit registry coverage (% of adults)

Number of individuals and firms listed in public credit registry as percentage of adult population

Private credit bureau coverage (% of adults)

Number of individuals and firms listed in largest private credit bureau as percentage of adult population

- Has up to 100 employees.
- Is 100% domestically owned, as is the lender.

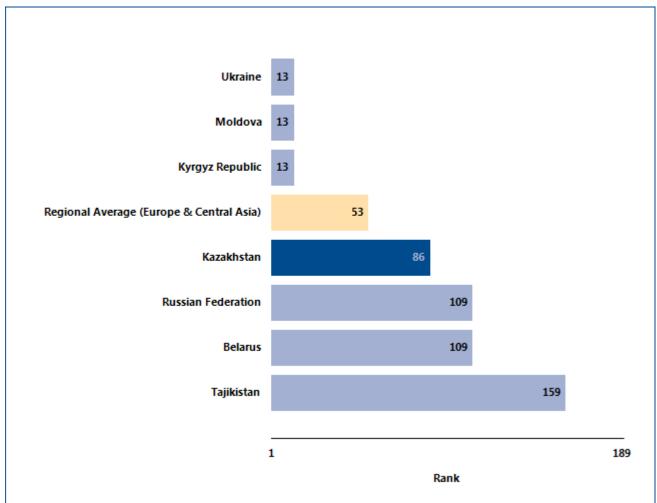

The ranking on the ease of getting credit is based on the percentile rankings on the sum of its component indicators: the depth of credit information index and the strength of legal rights index.

Where does the economy stand today?

How well do the credit information system and collateral and bankruptcy laws in Kazakhstan facilitate access to credit? The economy has a score of 5 on the depth of credit information index and a score of 4 on the strength of legal rights index (see the summary of scoring at the end of this chapter for details). Higher scores indicate more credit information and stronger legal rights for borrowers and lenders.

Globally, Kazakhstan stands at 86 in the ranking of 189 economies on the ease of getting credit (figure 6.1). The rankings for comparator economies and the regional average ranking provide other useful information for assessing how well regulations and institutions in Kazakhstan support lending and borrowing.

Figure 6.1 How Kazakhstan and comparator economies rank on the ease of getting credit

What are the changes over time?

While the most recent *Doing Business* data reflect how well the credit information system and collateral and bankruptcy laws in Kazakhstan support lending and borrowing today, data over time can help show where

institutions and regulations have been strengthened—and where they have not (table 6.1). That can help identify where the potential for improvement is greatest.

Table 6.1 The ease of getting credit in Kazakhstan over time By *Doing Business* report year

| Indicator | DB2005 | DB2006 | DB2007 | DB2008 | DB2009 | DB2010 | DB2011 | DB2012 | DB2013 | DB2014 |
|---|--------|--------|--------|--------|--------|--------|--------|--------|--------|--------|
| Rank | | | | | | | | | 82 | 86 |
| Strength of legal rights index (0-10) | 3 | 3 | 3 | 3 | 3 | 3 | 3 | 3 | 4 | 4 |
| Depth of credit information index (0-6) | 0 | 0 | 4 | 4 | 5 | 5 | 5 | 5 | 5 | 5 |
| Public registry coverage (% of adults) | 0.0 | 0.0 | 0.0 | 0.0 | 0.0 | 0.0 | 0.0 | 0.0 | 0.0 | 0.0 |
| Private bureau coverage (% of adults) | 0.0 | 0.0 | 5.5 | 13.7 | 25.6 | 29.5 | 29.9 | 37.6 | 39.3 | 45.6 |

Note: n.a. = not applicable (the economy was not included in *Doing Business* for that year). DB2013 rankings shown are not last year's published rankings but comparable rankings for DB2013 that capture the effects of such factors as data corrections and the addition of 4 economies (Libya, Myanmar, San Marino and South Sudan) to the sample this year.

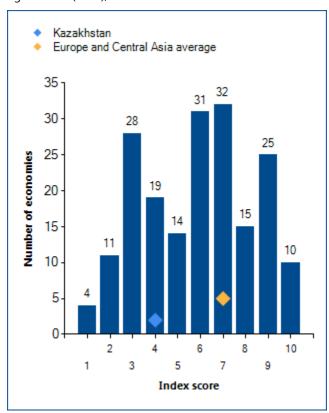

Source: Doing Business database.

One way to put an economy's score on the getting credit indicators into context is to see where the economy stands in the distribution of scores across economies. Figure 6.2 highlights the score on the strength of legal rights index for Kazakhstan in 2013

and shows the number of economies with this score in 2013 as well as the regional average score. Figure 6.3 shows the same thing for the depth of credit information index.

Figure 6.2 How strong are legal rights for borrowers and lenders?

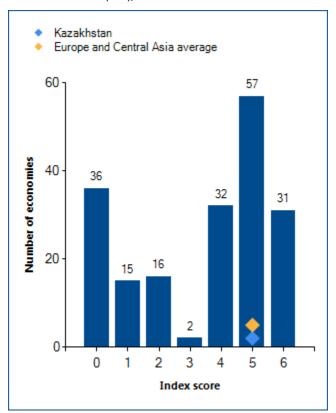

Number of economies with each score on strength of legal rights index (0–10), 2013

Note: Higher scores indicate that collateral and bankruptcy laws are better designed to facilitate access to credit. Source: Doing Business database.

Figure 6.3 How much credit information is shared—and how widely?

Number of economies with each score on depth of credit information index (0–6), 2013

Note: Higher scores indicate the availability of more credit information, from either a credit registry or a credit bureau, to facilitate lending decisions. Regional averages for the depth of credit information index exclude economies with no credit registry or credit bureau.

When economies strengthen the legal rights of lenders and borrowers under collateral and bankruptcy laws, and increase the scope, coverage and accessibility of credit information, they can increase entrepreneurs' access to credit. What credit reforms has *Doing Business* recorded in Kazakhstan (table 6.2)?

Table 6.2 How has Kazakhstan made getting credit easier—or not? By *Doing Business* report year

| DB year | Reform |
|---------|--|
| DB2009 | Kazakhstan's private credit bureau is adding 2 new suppliers of information a month, including retailers such as furniture companies and utilities like the gas company. Coupled to a credit boom, coverage shot up by 80%. Now even consumers who do not have a bank account or a credit card can build a credit history, improving their chances to obtain credit in the future. |
| DB2010 | No reform as measured by Doing Business. |
| DB2011 | No reform as measured by Doing Business. |
| DB2012 | No reform as measured by Doing Business. |
| DB2013 | Kazakhstan strengthened secured creditor rights by introducing new grounds for relief from an automatic stay during rehabilitation proceedings. |
| DB2014 | No reform as measured by Doing Business. |

Note: For information on reforms in earlier years (back to DB2005), see the *Doing Business* reports for these years, available at http://www.doingbusiness.org. *Source: Doing Business* database.

What are the details?

The getting credit indicators reported here for Kazakhstan are based on detailed information collected in that economy. The data on credit information sharing are collected through a survey of a credit registry and/or credit bureau (if one exists). To construct the depth of credit information index, a score of 1 is assigned for each of 6 features of the credit registry or credit bureau (see summary of scoring below).

The data on the legal rights of borrowers and lenders are gathered through a survey of financial lawyers and verified through analysis of laws and regulations as well as public sources of information on collateral and bankruptcy laws. For the strength of legal rights index, a score of 1 is assigned for each of 8 aspects related to legal rights in collateral law and 2 aspects in bankruptcy law.

Summary of scoring for the getting credit indicators in Kazakhstan

| Indicator | Kazakhstan | | OECD high income average |
|---|------------|------|--------------------------|
| Strength of legal rights index (0-10) | 4 | 7 | 7 |
| Depth of credit information index (0-6) | 5 | 5 | 5 |
| Public registry coverage (% of adults) | 0.0 | 33.9 | 42.9 |
| Private bureau coverage (% of adults) | 45.6 | 48.2 | 73.9 |

Note: In cases where an economy's regional classification is "OECD high income," regional averages above are only displayed once. Regional averages for the depth of credit information index exclude economies with no credit registry or credit bureau. Regional averages for the credit registry coverage exclude economies with no credit registry. Regional averages for the credit bureau coverage exclude economies with no credit bureau.

| Strength of legal rights index (0–10) | Index score: 4 |
|---|----------------|
| Can any business use movable assets as collateral while keeping possession of the assets; and any financial institution accept such assets as collateral? | |
| Does the law allow businesses to grant a non possessory security right in a single category of movable assets, without requiring a specific description of collateral? | Yes |
| Does the law allow businesses to grant a non possessory security right in substantially all of its assets, without requiring a specific description of collateral? | No |
| May a security right extend to future or after-acquired assets, and may it extend automatically to the products, proceeds or replacements of the original assets? | No |
| Is a general description of debts and obligations permitted in collateral agreements; can all types of debts and obligations be secured between parties; and can the collateral agreement include a maximum amount for which the assets are encumbered? | No |
| Is a collateral registry in operation, that is unified geographically and by asset type, with an electronic database indexed by debtor's names? | No |

| Strength of legal rights index (0–10) | Index score: 4 |
|---|----------------|
| Are secured creditors paid first (i.e. before tax claims and employee claims) when a debtor defaults outside an insolvency procedure? | No |
| Are secured creditors paid first (i.e. before tax claims and employee claims) when a business is liquidated? | No |
| Are secured creditors either not subject to an automatic stay on enforcement when a debtor enters a court-supervised reorganization procedure, or does the law provide secured creditors with grounds for relief from an automatic stay or/and sets a time limit to it? | Yes |
| Does the law allow parties to agree in a collateral agreement that the lender may enforce its security right out of court, at the time a security interest is created? | Yes |

| Depth of credit information index (0-6) | Credit bureau | Credit registry | Index score: 5 |
|---|---------------|-----------------|----------------|
| Are data on both firms and individuals distributed? | Yes | No | 1 |
| Are both positive and negative data distributed? | Yes | No | 1 |
| Does the registry distribute credit information from retailers, trade creditors or utility companies as well as financial institutions? | No | No | 0 |
| Are more than 2 years of historical credit information distributed? | Yes | No | 1 |
| Is data on all loans below 1% of income per capita distributed? | Yes | No | 1 |
| Is it guaranteed by law that borrowers can inspect their data in the largest credit registry? | Yes | No | 1 |

Note: An economy receives a score of 1 if there is a "yes" to either private bureau or public registry.

| Coverage | | Credit registry (% of adults) |
|-----------------------|-----------|----------------------------------|
| Number of firms | 127,760 | 0 |
| Number of individuals | 5,082,921 | 0 |

Protecting investors matters for the ability of companies to raise the capital they need to grow, innovate, diversify and compete. If the laws do not protect minority shareholders, investors may be reluctant to provide funding to companies through the purchase of shares unless they become the controlling shareholders. Effective regulations define related-party transactions precisely, promote clear and efficient disclosure requirements, require shareholder participation in major decisions of the company and set detailed standards of accountability for company insiders.

What do the indicators cover?

Doing Business measures the strength of minority shareholder protections against directors' use of corporate assets for personal gain—or self-dealing. The indicators distinguish 3 dimensions of investor transparency protections: of related-party transactions (extent of disclosure index), liability for self-dealing (extent of director liability index) and minority shareholders' access to evidence before and during trial (ease of shareholder suits index). The ranking on the strength of investor protection index is the simple average of the percentile rankings on these 3 indices. To make the data comparable across economies, a case study uses several assumptions about the business and the transaction.

The business (Buyer):

- Is a publicly traded corporation listed on the economy's most important stock exchange (or at least a large private company with multiple shareholders).
- Has a board of directors and a chief executive officer (CEO) who may legally act on behalf of Buyer where permitted, even if this is not specifically required by law.

The transaction involves the following details:

• Mr. James, a director and the majority shareholder of the company, proposes that

WHAT THE PROTECTING INVESTORS

INDICATORS MEASURE

Extent of disclosure index (0-10)

Approval process for related-party transactions

Disclosure requirements in case of relatedparty transactions

Extent of director liability index (0-10)

Ability of minority shareholders to file a direct or derivative lawsuit

Ability of minority shareholders to hold interested parties and members of the approving body liable for prejudicial related-party transactions

Available legal remedies (damages, repayment of profits, fines, imprisonment and rescission of the transaction)

Ease of shareholder suits index (0-10)

Access to internal corporate documents (directly or through a government inspector)

Documents and information available during trial

Strength of investor protection index (0–10)

Simple average of the extent of disclosure, extent of director liability and ease of shareholder suits indices

the company purchase used trucks from another company he owns.

- The price is higher than the going price for used trucks, but the transaction goes forward.
- All required approvals are obtained, and all required disclosures made, though the transaction is prejudicial to Buyer.
- Shareholders sue the interested parties and the members of the board of directors.

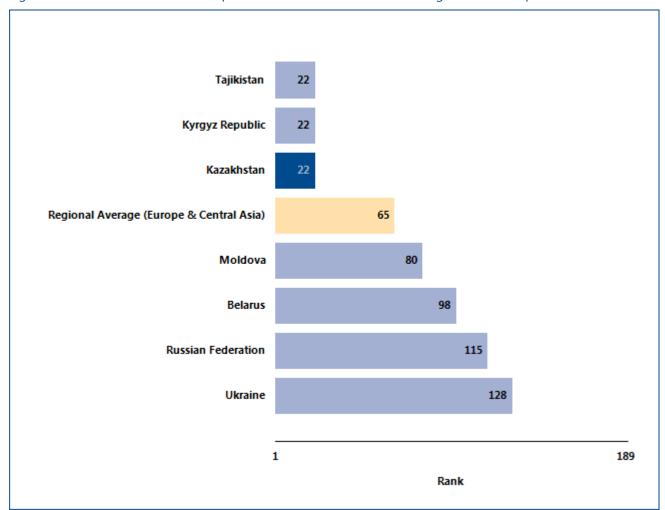

Where does the economy stand today?

How strong are investor protections against self-dealing in Kazakhstan? The economy has a score of 6.7 on the strength of investor protection index, with a higher score indicating stronger protections (see the summary of scoring at the end of this chapter for details).

Globally, Kazakhstan stands at 22 in the ranking of 189 economies on the strength of investor protection

index (figure 7.1). While the indicator does not measure all aspects related to the protection of minority investors, a higher ranking does indicate that an economy's regulations offer stronger investor protections against self-dealing in the areas measured.

Figure 7.1 How Kazakhstan and comparator economies rank on the strength of investor protection index

What are the changes over time?

While the most recent *Doing Business* data reflect how well regulations in Kazakhstan protect minority investors today, data over time show whether the protections have been strengthened (table 7.1). And

the global ranking on the strength of investor protection index over time shows whether the economy is slipping behind other economies in investor protections—or surpassing them.

Table 7.1 The strength of investor protections in Kazakhstan over time By *Doing Business* report year

| Indicator | DB2006 | DB2007 | DB2008 | DB2009 | DB2010 | DB2011 | DB2012 | DB2013 | DB2014 |
|--|--------|--------|--------|--------|--------|--------|--------|--------|--------|
| Rank | | | | | | | | 21 | 22 |
| Extent of disclosure index (0-10) | 5 | 5 | 5 | 5 | 5 | 6 | 7 | 7 | 7 |
| Extent of director liability index (0-10) | 1 | 1 | 1 | 1 | 1 | 1 | 6 | 6 | 6 |
| Ease of shareholder suits index (0-10) | 7 | 7 | 7 | 7 | 7 | 7 | 7 | 7 | 7 |
| Strength of investor protection index (0-10) | 4.3 | 4.3 | 4.3 | 4.3 | 4.3 | 4.7 | 6.7 | 6.7 | 6.7 |

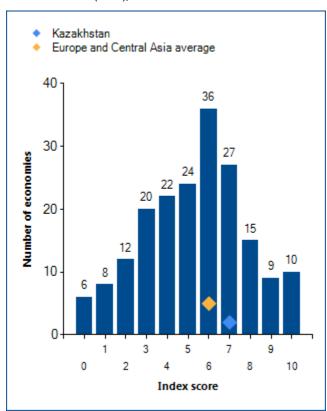

Note: n.a. = not applicable (the economy was not included in *Doing Business* for that year). DB2013 rankings shown are not last year's published rankings but comparable rankings for DB2013 that capture the effects of such factors as data corrections and the addition of 4 economies (Libya, Myanmar, San Marino and South Sudan) to the sample this year.

Source: Doing Business database.

One way to put an economy's scores on the protecting investors indicators into context is to see where the economy stands in the distribution of scores across economies. Figure 7.2 highlights the score on the extent of disclosure index for Kazakhstan in 2013 and

Figure 7.2 How strong are disclosure requirements?

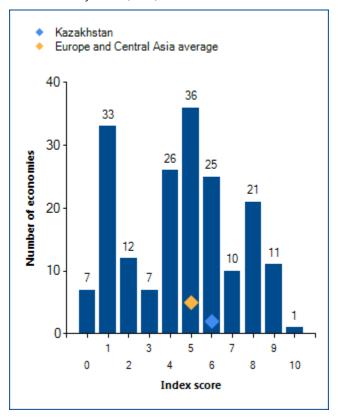

Number of economies with each score on the extent of disclosure index (0–10), 2013

Note: Higher scores indicate greater disclosure. *Source: Doing Business* database.

shows the number of economies with this score in 2013 as well as the regional average score. Figure 7.3 applies to the extent of director liability index, and figure 7.4 to the ease of shareholder suits index.

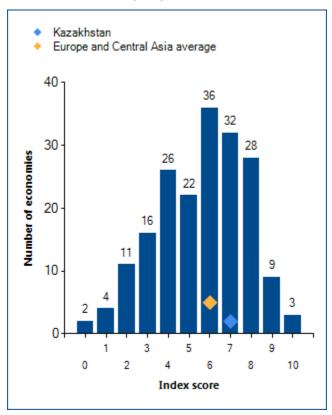

Figure 7.3 How strong is the liability regime for directors? Number of economies with each score on the extent of director liability index (0–10), 2013

Note: Higher scores indicate greater liability of directors. *Source: Doing Business* database.

Figure 7.4 How easy is accessing internal corporate documents?

Number of economies with each score on the ease of shareholder suits index (0–10), 2013

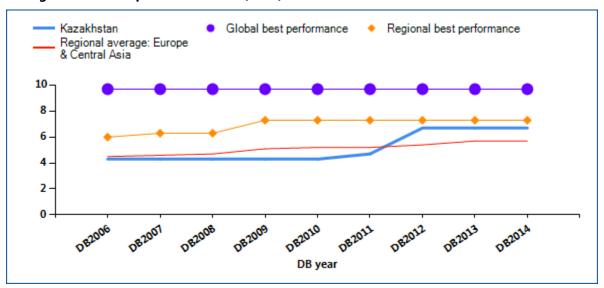

Note: Higher scores indicate greater minority shareholder access to evidence before and during trial.

The scores recorded over time for Kazakhstan on the strength of investor protection index may also be revealing (figure 7.5). Equally interesting may be the

changes over time in the regional average score on this index.

Figure 7.5 Have investor protections become stronger over time?

Strength of investor protection index (0-10)

Note: The higher the score, the stronger the protections.

Economies with the strongest protections of minority investors from self-dealing require detailed disclosure and define clear duties for directors. They also have well-functioning courts and up-to-date procedural rules that give minority shareholders the means to prove their case and obtain a judgment within a

reasonable time. As a result, reforms to strengthen investor protections may move ahead on different fronts—such as through new or amended company laws, securities regulations or civil procedure rules. What investor protection reforms has *Doing Business* recorded in Kazakhstan (table 7.2)?

Table 7.2 How has Kazakhstan strengthened investor protections—or not? By *Doing Business* report year

| DB year | Reform |
|---------|--|
| DB2009 | No reform as measured by Doing Business. |
| DB2010 | No reform as measured by Doing Business. |
| DB2011 | Kazakhstan strengthened investor protections by requiring greater corporate disclosure in company annual reports. |
| DB2012 | Kazakhstan strengthened investor protections by regulating the approval of transactions between interested parties and making it easier to sue directors in cases of prejudicial transactions between interested parties. |
| DB2013 | No reform as measured by Doing Business. |
| DB2014 | No reform as measured by Doing Business. |

Note: For information on reforms in earlier years (back to DB2006), see the *Doing Business* reports for these years, available at http://www.doingbusiness.org.

What are the details?

The protecting investors indicators reported here for Kazakhstan are based on detailed information collected through a survey of corporate and securities lawyers about securities regulations, company laws and court rules of evidence and procedure. To construct the extent of disclosure, extent of director

liability and ease of shareholder suits indices, scores are assigned to each based on a range of conditions relating to disclosure, director liability and shareholder suits in a standard case study transaction (see the data notes at the end of this chapter). The summary below shows the details underlying the scores for Kazakhstan.

Summary of scoring for the protecting investors indicators in Kazakhstan

| Indicator | Kazakhstan | Europe & Central Asia average | OECD high income average |
|--|------------|----------------------------------|--------------------------|
| Extent of disclosure index (0-10) | 7 | 6 | 7 |
| Extent of director liability index (0-10) | 6 | 5 | 5 |
| Ease of shareholder suits index (0-10) | 7 | 6 | 7 |
| Strength of investor protection index (0-10) | 6.7 | 5.7 | 6.2 |

Note: In cases where an economy's regional classification is "OECD high income," regional averages above are only displayed once.

| | Score | Score description |
|--|-------|--|
| Extent of disclosure index (0-10) | 7 | |
| What corporate body provides legally sufficient approval for the transaction? | 3 | Shareholders meeting and Mr. James is not allowed to vote |
| Whether disclosure of the conflict of interest by Mr. James to the board of directors is required? | 2 | Full disclosure of all material facts |
| Whether immediate disclosure of the transaction to the public and/or shareholders is required? | 0 | No disclosure obligation |
| Whether disclosure of the transaction in published periodic filings (annual reports) is required? | 1 | Disclosure on the transaction only |
| Whether an external body must review the terms of the transaction before it takes place? | 1 | Yes |
| Extent of director liability index (0-10) | 6 | |
| Whether shareholders can sue directly or derivatively for the damage that the Buyer-Seller transaction causes to the company? | 1 | Yes |
| Whether shareholders can hold Mr. James liable for the damage that the Buyer-Seller transaction causes to the company? | 2 | Liable for unfair/oppressive transaction or prejudicial to minority shareholders |
| Whether shareholders can hold members of the approving body liable for the damage that the Buyer-Seller transaction causes to the company? | 1 | Liable for negligence |

| | Score | Score description |
|---|-------|--|
| Whether a court can void the transaction upon a successful claim by a shareholder plaintiff? | 0 | Not possible or only in case of Seller's fraud or bad faith |
| Whether Mr. James pays damages for the harm caused to the company upon a successful claim by the shareholder plaintiff? | 1 | Yes |
| Whether Mr. James repays profits made from the transaction upon a successful claim by the shareholder plaintiff? | 1 | Yes |
| Whether fines and imprisonment can be applied against Mr. James? | 0 | No |
| Ease of shareholder suits index (0-10) | 7 | |
| Whether shareholders owning 10% or less of Buyer's shares can inspect transaction documents before filing suit? | 1 | Yes |
| Whether shareholders owning 10% or less of Buyer's shares can request an inspector to investigate the transaction? | 1 | Yes |
| Whether the plaintiff can obtain any documents from the defendant and witnesses during trial? | 2 | Information that directly proves specific facts in the plaintiff's claim |
| Whether the plaintiff can request categories of documents from the defendant without identifying specific ones? | 0 | No |
| Whether the plaintiff can directly question the defendant and witnesses during trial? | 2 | Yes, without approval from the judge |
| Whether the level of proof required for civil suits is lower than that of criminal cases? | 1 | Yes |
| Strength of investor protection index (0-10) | 6.7 | |

Taxes are essential. They fund the public amenities, infrastructure and services that are crucial for a properly functioning economy. But the level of tax rates needs to be carefully chosen—and needless complexity in tax rules avoided. According to *Doing Business* data, in economies where it is more difficult and costly to pay taxes, larger shares of economic activity end up in the informal sector—where businesses pay no taxes at all.

What do the indicators cover?

Using a case scenario, Doing Business measures the taxes and mandatory contributions that a medium-size company must pay in a given year as well as the administrative burden of paying taxes and contributions. This case scenario uses a set of financial statements and assumptions about transactions made over the year. Information is also compiled on the frequency of filing and payments as well as time taken to comply with tax laws. The ranking on the ease of paying taxes is the simple average of the percentile rankings on its component indicators: number of annual payments, time and total tax rate, with a threshold being applied to the total tax rate. To make the data comparable across economies, several assumptions about the business and the taxes and contributions are used.

- TaxpayerCo is a medium-size business that started operations on January 1, 2011.
- The business starts from the same financial position in each economy. All the taxes and mandatory contributions paid during the second year of operation are recorded.
- Taxes and mandatory contributions are measured at all levels of government.

WHAT THE PAYING TAXES INDICATORS

MEASURE

Tax payments for a manufacturing company in 2012 (number per year adjusted for electronic and joint filing and payment)

Total number of taxes and contributions paid, including consumption taxes (value added tax, sales tax or goods and service tax)

Method and frequency of filing and payment

Time required to comply with 3 major taxes (hours per year)

Collecting information and computing the tax payable

Completing tax return forms, filing with proper agencies

Arranging payment or withholding

Preparing separate tax accounting books, if required

Total tax rate (% of profit before all taxes)

Profit or corporate income tax

Social contributions and labor taxes paid by the employer

Property and property transfer taxes

Dividend, capital gains and financial transactions taxes

Waste collection, vehicle, road and other taxes

- Taxes and mandatory contributions include corporate income tax, turnover tax and all labor taxes and contributions paid by the company.
- A range of standard deductions and exemptions are also recorded.

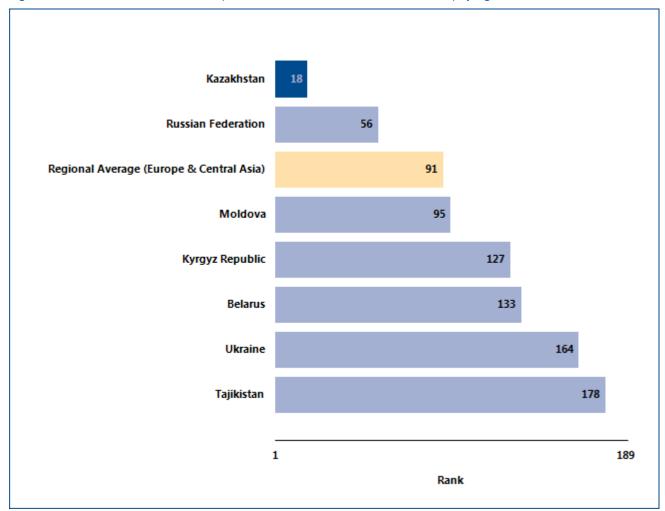

¹ The threshold is defined as the highest total tax rate among the top 15% of economies in the ranking on the total tax rate. It is calculated and adjusted on a yearly basis. The threshold is not based on any economic theory of an "optimal tax rate" that minimizes distortions or maximizes efficiency in the tax system of an economy overall. Instead, it is mainly empirical in nature, set at the lower end of the distribution of tax rates levied on medium-size enterprises in the manufacturing sector as observed through the paying taxes indicators. This reduces the bias in the indicators toward economies that do not need to levy significant taxes on companies like the *Doing Business* standardized case study company because they raise public revenue in other ways—for example, through taxes on foreign companies, through taxes on sectors other than manufacturing or from natural resources (all of which are outside the scope of the methodology). This year's threshold is 25.5%.

Where does the economy stand today?

What is the administrative burden of complying with taxes in Kazakhstan—and how much do firms pay in taxes? On average, firms make 7 tax payments a year, spend 188 hours a year filing, preparing and paying taxes and pay total taxes amounting to 28.6% of profit (see the summary at the end of this chapter for details).

Globally, Kazakhstan stands at 18 in the ranking of 189 economies on the ease of paying taxes (figure 8.1). The rankings for comparator economies and the regional average ranking provide other useful information for assessing the tax compliance burden for businesses in Kazakhstan.

Figure 8.1 How Kazakhstan and comparator economies rank on the ease of paying taxes

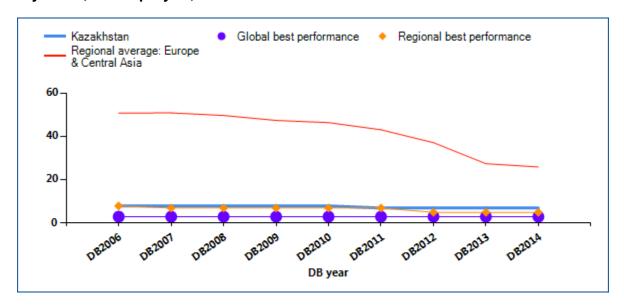

What are the changes over time?

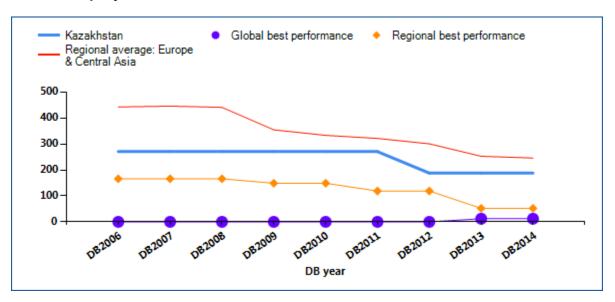

The benchmarks provided by the economies that over time have had the best performance regionally or globally on the number of payments or the time required to prepare and file taxes (figure 8.2) help show what is possible in easing the administrative burden of tax compliance. And changes in regional averages can show where Kazakhstan is keeping up—and where it is falling behind.

Figure 8.2 Has paying taxes become easier over time?

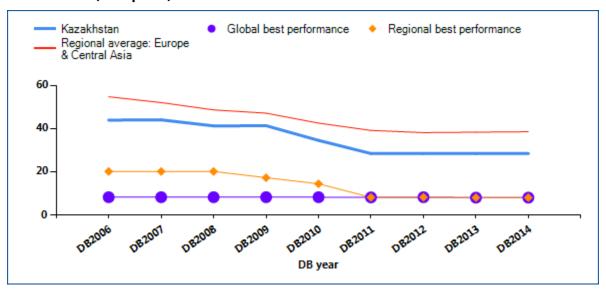

Payments (number per year)

Time (hours per year)

Total tax rate (% of profit)

Note: DB2013 rankings shown are not last year's published rankings but comparable rankings for DB2013 that capture the effects of such factors as data corrections and the addition of 4 economies (Libya, Myanmar, San Marino and South Sudan) to the sample this year. DB2013 rankings reflect changes to the methodology. For all economies with a total tax rate below the threshold of 25.5% applied in DB2014, the total tax rate is set at 25.5% for the purpose of calculating the ranking on the ease of paying taxes.

PAYING TAXES

Economies around the world have made paying taxes faster and easier for businesses—such as by consolidating filings, reducing the frequency of payments or offering electronic filing and payment. Many have lowered tax rates. Changes have brought

concrete results. Some economies simplifying tax payment and reducing rates have seen tax revenue rise. What tax reforms has *Doing Business* recorded in Kazakhstan (table 8.1)?

Table 8.1 How has Kazakhstan made paying taxes easier—or not? By *Doing Business* report year

| DB year | Reform |
|---------|--|
| DB2009 | No reform as measured by Doing Business. |
| DB2010 | Kazakhstan reduced the tax burden on companies by reducing the social tax for 2008 and by reducing the corporate income tax rate from 30% to 10% for 2009. |
| DB2011 | No reform as measured by Doing Business. |
| DB2012 | No reform as measured by Doing Business. |
| DB2013 | No reform as measured by Doing Business. |
| DB2014 | No reform as measured by Doing Business. |

Note: For information on reforms in earlier years (back to DB2006), see the *Doing Business* reports for these years, available at http://www.doingbusiness.org.

PAYING TAXES

What are the details?

The indicators reported here for Kazakhstan are based on a standard set of taxes and contributions that would be paid by the case study company used by *Doing Business* in collecting the data (see the section in this chapter on what the indicators cover). Tax practitioners are asked to review standard financial statements as well as a standard list of transactions that the company completed during the year. Respondents are asked how much in taxes and mandatory contributions the business must pay and what the process is for doing so.

LOCATION OF STANDARDIZED COMPANY

City: Almaty

The taxes and contributions paid are listed in the summary below, along with the associated number of payments, time and tax rate.

Summary of tax rates and administrative burden in Kazakhstan

| Indicator | Kazakhstan | | OECD high income average |
|---------------------------------|------------|------|--------------------------|
| Payments (number per year) | 7 | 26 | 12 |
| Time (hours per year) | 188 | 246 | 175 |
| Profit tax (%) | 15.9 | 9.0 | 16.1 |
| Labor tax and contributions (%) | 11.2 | 22.6 | 23.1 |
| Other taxes (%) | 1.6 | 7.0 | 2.0 |
| Total tax rate (% profit) | 28.6 | 38.7 | 41.3 |

Note: In cases where an economy's regional classification is "OECD high income," regional averages above are only displayed once.

| Tax or mandatory contribution | 1 1 | Notes on payments | Time (hours) | Statutory tax rate | | Total tax rate (% of profit) | Notes on total tax rate |
|-------------------------------|-----|-------------------|-----------------|-----------------------|---|------------------------------------|-------------------------------|
| Corporate income tax | 1 | online filing | 75 | 20% | taxable profit | 15.9 | |
| Social Tax | 1 | online filing | 70 | 11% | gross salaries less obligatory pension contributions | | |

| Tax or mandatory contribution | Payments (number) | Notes on payments | Time (hours) | Statutory tax rate | | Total tax rate (% of profit) | |
|-------------------------------|----------------------|--------------------------------------|-----------------|---|--|------------------------------------|-----------------|
| Property tax | 0 | online filing and paid jointly | 0 | 2% | property annual average net book value | 1.4 | |
| Environment pollution fee | 1 | online filing | 0 | KZT 1068 | amount of waste and fuel consumpti on | 0.1 | |
| Land tax | 1 | online filing | 0 | KZT 28.95 per square meter | land area | 0.1 | |
| Vehicle tax | 1 | online filing | 0 | 9 MCI (i.e. 9* KZT 1,618 for 2012) | carrying capacity | 0.1 | |
| Fuel tax | 1 | | 0 | KZT 500 per 1 tone | number of liters | 0 | small amount |
| Value added tax (VAT) | 1 | online filing | 43 | 12% | value added | 0 | not included |
| Totals | 7 | | 188 | | | 28.6 | |

In today's globalized world, making trade between economies easier is increasingly important for business. Excessive document requirements, burdensome customs procedures, inefficient port operations and inadequate infrastructure all lead to extra costs and delays for exporters and importers, stifling trade potential. Research shows that exporters in developing countries gain more from a 10% drop in their trading costs than from a similar reduction in the tariffs applied to their products in global markets.

What do the indicators cover?

Doing Business measures the time and cost (excluding tariffs and the time and cost for sea transport) associated with exporting and importing a standard shipment of goods by sea transport, and the number of documents necessary to complete the transaction. The indicators cover procedural requirements such as documentation requirements and procedures at customs and other regulatory agencies as well as at the port. They also cover trade logistics, including the time and cost of inland transport to the largest business city. The ranking on the ease of trading across borders is the simple average of the percentile rankings on its component indicators: documents, time and cost to export and import.

To make the data comparable across economies, *Doing Business* uses several assumptions about the business and the traded goods.

The business:

- Is of medium size and employs 60 people.
- Is located in the periurban area of the economy's largest business city.
- Is a private, limited liability company, domestically owned, formally registered and operating under commercial laws and regulations of the economy.

The traded goods:

• Are not hazardous nor do they include

WHAT THE TRADING ACROSS BORDERS INDICATORS MEASURE

Documents required to export and import (number)

Bank documents

Customs clearance documents

Port and terminal handling documents

Transport documents

Time required to export and import (days)

Obtaining, filling out and submitting all the documents

Inland transport and handling

Customs clearance and inspections

Port and terminal handling

Does not include sea transport time

Cost required to export and import (US\$ per container)

All documentation

Inland transport and handling

Customs clearance and inspections

Port and terminal handling

Official costs only, no bribes

military items.

- Do not require refrigeration or any other special environment.
- Do not require any special phytosanitary or environmental safety standards other than accepted international standards.
- Are one of the economy's leading export or import products.
- Are transported in a dry-cargo, 20-foot full container load.

Where does the economy stand today?

What does it take to export or import in Kazakhstan? According to data collected by *Doing Business*, exporting a standard container of goods requires 10 documents, takes 81 days and costs \$4885. Importing the same container of goods requires 12 documents, takes 69 days and costs \$4865 (see the summary of procedures and documents at the end of this chapter for details).

Globally, Kazakhstan stands at 186 in the ranking of 189 economies on the ease of trading across borders (figure 9.1). The rankings for comparator economies and the regional average ranking provide other useful information for assessing how easy it is for a business in Kazakhstan to export and import goods.

Figure 9.1 How Kazakhstan and comparator economies rank on the ease of trading across borders

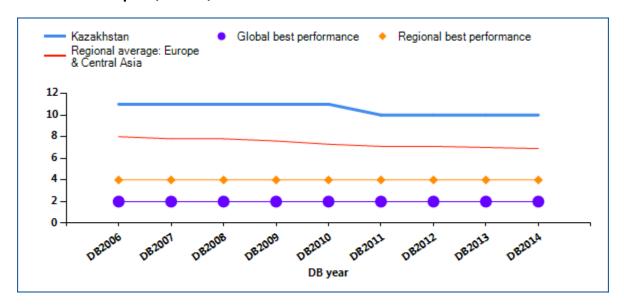

What are the changes over time?

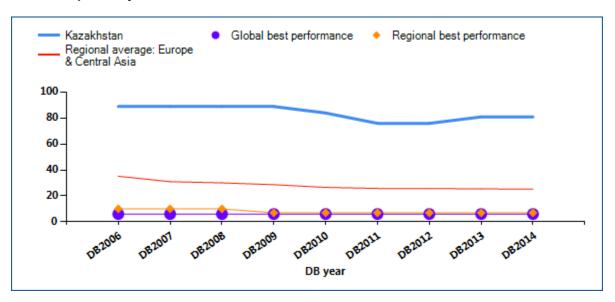

The benchmarks provided by the economies that over time have had the best performance regionally or globally on the documents, time or cost required to export or import (figure 9.2) help show what is possible in making it easier to trade across borders. And changes in regional averages can show where Kazakhstan is keeping up—and where it is falling behind.

Figure 9.2 Has trading across borders become easier over time?

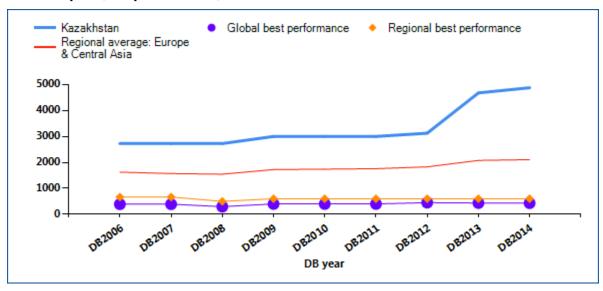

Documents to export (number)

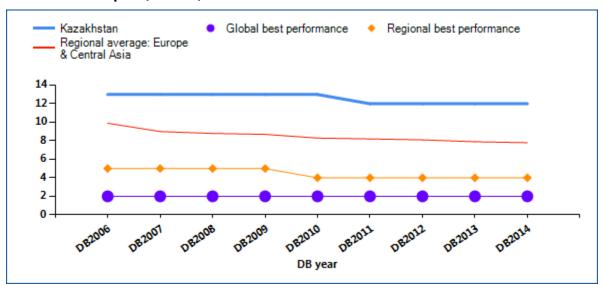

Time to export (days)

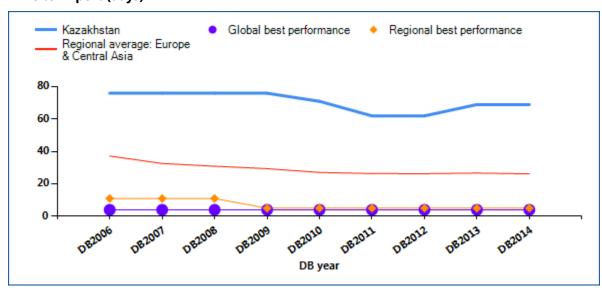

Cost to export (US\$ per container)

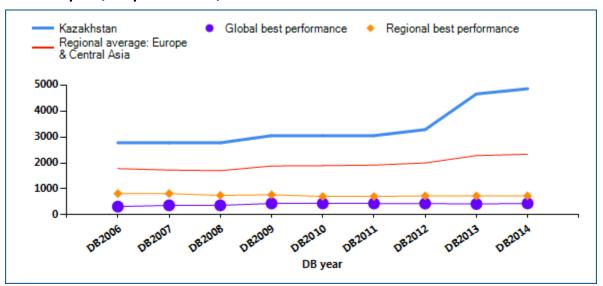

Documents to import (number)

Time to import (days)

Cost to import (US\$ per container)

Note: DB2013 rankings shown are not last year's published rankings but comparable rankings for DB2013 that capture the effects of such factors as data corrections and the addition of 4 economies (Libya, Myanmar, San Marino and South Sudan) to the sample this year.

In economies around the world, trading across borders as measured by *Doing Business* has become faster and easier over the years. Governments have introduced tools to facilitate trade—including single windows, risk-based inspections and electronic data interchange

systems. These changes help improve the trading environment and boost firms' international competitiveness. What trade reforms has *Doing Business* recorded in Kazakhstan (table 9.1)?

Table 9.1 How has Kazakhstan made trading across borders easier—or not? By *Doing Business* report year

| DB year | Reform |
|---------|--|
| DB2009 | No reform as measured by Doing Business. |
| DB2010 | No reform as measured by Doing Business. |
| DB2011 | Kazakhstan speeded up trade through efforts to modernize customs, including implementation of a risk management system and improvements in customs automation. |
| DB2012 | No reform as measured by Doing Business. |
| DB2013 | No reform as measured by Doing Business. |
| DB2014 | No reform as measured by Doing Business. |

Note: For information on reforms in earlier years (back to DB2006), see the *Doing Business* reports for these years, available at http://www.doingbusiness.org.

What are the details?

The indicators reported here for Kazakhstan are based on a set of specific procedural requirements for trading a standard shipment of goods by ocean transport (see the section in this chapter on what the indicators cover). Information on the procedures as well as the required documents and the time and cost to complete each procedure is collected from local freight forwarders, shipping lines, customs brokers, port officials and banks.

LOCATION OF STANDARDIZED COMPANY

City: Almaty

The procedural requirements, and the associated time and cost, for exporting and importing a standard shipment of goods are listed in the summary below, along with the required documents.

Summary of procedures and documents for trading across borders in Kazakhstan

| Indicator | Kazakhstan | Europe & Central Asia average | OECD high income average |
|-------------------------------------|------------|----------------------------------|--------------------------|
| Documents to export (number) | 10 | 7 | 4 |
| Time to export (days) | 81 | 25 | 11 |
| Cost to export (US\$ per container) | 4,885 | 2,109 | 1,070 |
| Documents to import (number) | 12 | 8 | 4 |
| Time to import (days) | 69 | 26 | 10 |
| Cost to import (US\$ per container) | 4,865 | 2,339 | 1,090 |

Note: In cases where an economy's regional classification is "OECD high income," regional averages above are only displayed once.

| Procedures to export | Time (days) | Cost (US\$) |
|---|-------------|-------------|
| Documents preparation | 21 | 330 |
| Customs clearance and technical control | 9 | 425 |
| Ports and terminal handling | 5 | 330 |
| Inland transportation and handling | 46 | 3,800 |
| Totals | 81 | 4,885 |

| Procedures to import | Time (days) | Cost (US\$) |
|-----------------------|-------------|-------------|
| Documents preparation | 21 | 310 |

| Procedures to import | Time (days) | Cost (US\$) |

| Packing list |
| Railway bill (Transport document) |
| Technical standard certificate |
| Terminal handling receipts |
| Transit document |

Effective commercial dispute resolution has many benefits. Courts are essential for entrepreneurs because they interpret the rules of the market and protect economic rights. Efficient and transparent courts encourage new business relationships because businesses know they can rely on the courts if a new customer fails to pay. Speedy trials are essential for small enterprises, which may lack the resources to stay in business while awaiting the outcome of a long court dispute.

What do the indicators cover?

Doing Business measures the efficiency of the judicial system in resolving a commercial dispute before local courts. Following the step-by-step evolution of a standardized case study, it collects data relating to the time, cost and procedural complexity of resolving a commercial lawsuit. The ranking on the ease of enforcing contracts is the simple average of the percentile rankings on its component indicators: procedures, time and cost.

The dispute in the case study involves the breach of a sales contract between 2 domestic businesses. The case study assumes that the court hears an expert on the quality of the goods in dispute. This distinguishes the case from simple debt enforcement. To make the data comparable across economies, *Doing Business* uses several assumptions about the case:

- The seller and buyer are located in the economy's largest business city.
- The buyer orders custom-made goods, then fails to pay.
- The seller sues the buyer before a competent court.
- The value of the claim is 200% of income per capita.
- The seller requests a pretrial attachment to secure the claim.

WHAT THE ENFORCING CONTRACTS INDICATORS MEASURE

Procedures to enforce a contract through the courts (number)

Steps to file and serve the case Steps for trial and judgment Steps to enforce the judgment

Time required to complete procedures (calendar days)

Time to file and serve the case

Time for trial and obtaining judgment

Time to enforce the judgment

Cost required to complete procedures (% of claim)

Average attorney fees
Court costs

Enforcement costs

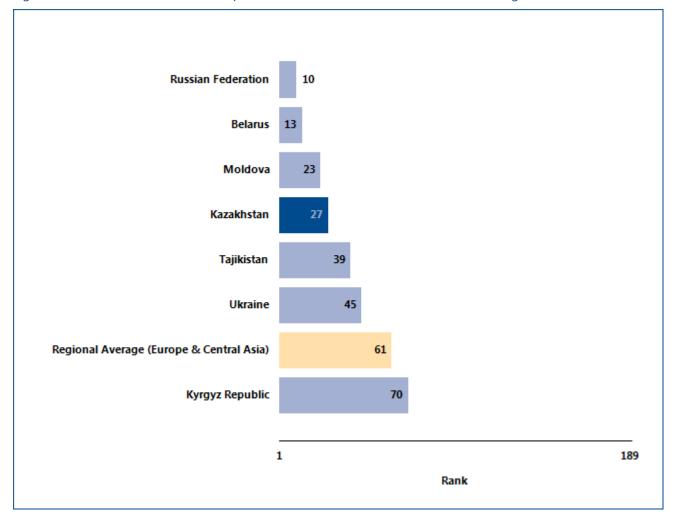

- The dispute on the quality of the goods requires an expert opinion.
- The judge decides in favor of the seller; there is no appeal.
- The seller enforces the judgment through a public sale of the buyer's movable assets.

Where does the economy stand today?

How efficient is the process of resolving a commercial dispute through the courts in Kazakhstan? According to data collected by *Doing Business*, contract enforcement takes 370 days, costs 22.0% of the value of the claim and requires 37 procedures (see the summary at the end of this chapter for details).

Globally, Kazakhstan stands at 27 in the ranking of 189 economies on the ease of enforcing contracts (figure 10.1). The rankings for comparator economies and the regional average ranking provide other useful benchmarks for assessing the efficiency of contract enforcement in Kazakhstan.

Figure 10.1 How Kazakhstan and comparator economies rank on the ease of enforcing contracts

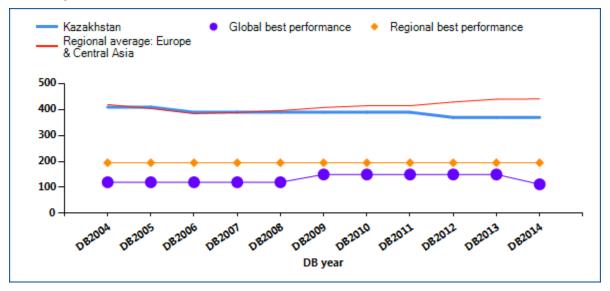

What are the changes over time?

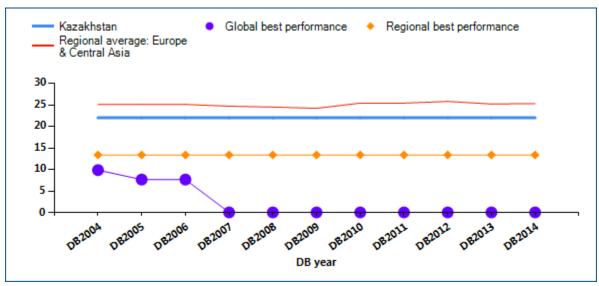

The benchmarks provided by the economies that over time have had the best performance regionally or globally on the number of steps, time or cost required to enforce a contract through the courts (figure 10.2) help show what is possible in improving the efficiency of contract enforcement. And changes in regional averages can show where Kazakhstan is keeping up—and where it is falling behind.

Figure 10.2 Has enforcing contracts become easier over time?

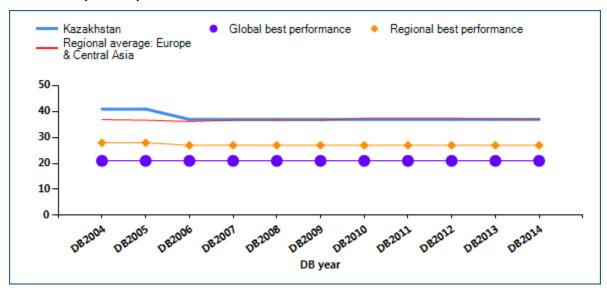

Time (days)

Cost (% of claim)

Procedures (number)

Note: DB2013 rankings shown are not last year's published rankings but comparable rankings for DB2013 that capture the effects of such factors as data corrections and the addition of 4 economies (Libya, Myanmar, San Marino and South Sudan) to the sample this year.

Economies in all regions have improved contract enforcement in recent years. A judiciary can be improved in different ways. Higher-income economies tend to look for ways to enhance efficiency by introducing new technology. Lower-income economies often work on reducing backlogs by introducing

periodic reviews to clear inactive cases from the docket and by making procedures faster. What reforms making it easier (or more difficult) to enforce contracts has *Doing Business* recorded in Kazakhstan (table 10.1)?

Table 10.1 How has Kazakhstan made enforcing contracts easier—or not? By *Doing Business* report year

| DB year | Reform |
|---------|--|
| DB2009 | No reform as measured by Doing Business. |
| DB2010 | No reform as measured by Doing Business. |
| DB2011 | No reform as measured by Doing Business. |
| DB2012 | No reform as measured by Doing Business. |
| DB2013 | No reform as measured by Doing Business. |
| DB2014 | No reform as measured by Doing Business. |

Note: For information on reforms in earlier years (back to DB2005), see the *Doing Business* reports for these years, available at http://www.doingbusiness.org.

What are the details?

The indicators reported here for Kazakhstan are based on a set of specific procedural steps required to resolve a standardized commercial dispute through the courts (see the section in this chapter on what the indicators cover). These procedures, and the time and cost of completing them, are identified through study of the codes of civil procedure and other court regulations, as well as through surveys completed by local litigation lawyers (and, in a quarter of the economies covered by *Doing Business*, by judges as well).

| COURT NAME | |
|------------------|--|
| City: | Almaty |
| Claim Value LCU: | 2828259 |
| Court Name: | Almaty Inter-District Commercial Court |

The procedures for resolving a commercial lawsuit, and the associated time and cost, are listed in the summary below.

Summary of procedures for enforcing a contract in Kazakhstan—and the time and cost

| Indicator | Kazakhstan | Europe & Central Asia average | OECD high income average |
|---|------------|----------------------------------|--------------------------|
| Time (days) | 370 | 441 | 529 |
| Filing and service | 15 | | |
| Trial and judgment | 135 | | |
| Enforcement of judgment | 220 | | |
| Cost (% of claim) | 22.0 | 25.3 | 21.0 |
| Attorney cost (% of claim) | 8.5 | | |
| Court cost (% of claim) | 3.5 | | |

| Procedures (number) | 37 | 37 | 31 |
| Number of procedures (without bonus points) | 38 | | |
| Specialized commercial courts | -1 | | |
| Total number of procedures (including bonus points) | 37 | | |

Note: In cases where an economy's regional classification is "OECD high income," regional averages above are only displayed once.

| No. | Procedure |
|-----|--|
| | Filing and service: |
| 1 | Plaintiff requests payment: Plaintiff or his lawyer asks Defendant orally or in writing to comply with the contract. |
| 2 | Plaintiff's hiring of lawyer: Plaintiff hires a lawyer to represent him before the court. |
| * | Plaintiff's filing of summons and complaint: Plaintiff files his summons and complaint with the court, orally or in writing. |
| * | Plaintiff's payment of court fees: Plaintiff pays court duties, stamp duties, or any other type of court fee. |
| 3 | Registration of court case: The court administration registers the lawsuit or court case. This includes assigning a reference number to the lawsuit or court case. |
| * | Assignment of court case to a judge: The court case is assigned to a specific judge through a random procedure, automated system, ruling of an administrative judge, court officer, etc. |
| 4 | Court scrutiny of summons and complaint: A judge examines Plaintiff's summons and complaint for formal requirements. |
| * | Judge admits summons and complaint: After verifying the formal requirements, the judge decides to admit Plaintiff's summons and complaint. |
| 5 | Court order for service: Upon Plaintiff's request, judge orders process be served on Defendant. |
| 6 | Delivery of summons and complaint to person authorized to perform service of process on Defendant: The judge or a court officer delivers the summons to a summoning office, officer, or authorized person (including Plaintiff), for service of process on Defendant. |
| * | Mailing of summons and complaint: Court or process server, including (private) bailiff, mails summons and complaint to Defendant. |
| 7 | First attempt at physical delivery: A first attempt to physically deliver summons and complaint to Defendant is successful in the majority of cases. |
| 8 | Second attempt at physical delivery: If a first attempt was not successful, a second attempt to physically deliver the summons and complaint to Defendant is required by law or standard practice. |
| * | Proof of service: Plaintiff submits proof of service to court. |
| * | Application for pre-judgment attachment: Plaintiff submits an application in writing for the attachment of Defendant's property prior to judgment. (see assumption 5) |
| * | Decision on pre-judgment attachment: The judge decides whether to grant Plaintiff's request for pre-judgment attachment of Defendant's property and notifies Plaintiff and Defendant of the decision. This step may include requesting that Plaintiff submit guarantees or bonds to secure Defendant |
| 9 | Pre-judgment attachment.: Defendant's property is attached prior to judgment. Attachment is either physical or achieved by registering, marking, debiting or separating assets. (see assumption 5) |

| No. | Procedure | |
|-----|---|--|
| 10 | Custody of assets attached prior to judgment: Defendant's attached assets are put under enforcement officer's or (private) bailiff's care. (see assumption 5) | |
| 11 | Report on pre-judgment attachment: Court enforcement officer or (private) bailiff issues and delivers a report on the attachment of Defendant's property to the judge. (see assumption 5) | |
| | Trial and judgment: | |
| * | Defendant's filing of preliminary exemptions: Defendant presents preliminary exemptions to the court. Preliminary exemptions differ from answers on the merits of the claim. Examples of preliminary exemptions are statute of limitations, jurisdictions, etc. | |
| 12 | Defendant's filing of defense or answer to Plaintiff's claim: Defendant files a written pleading which includes his defense or answer on the merits of the case. Defendant's written answer may or may not include witness statements, expert statements, the documents Defendant relies on as evidence and the legal authori | |
| 13 | Deadline for Plaintiff to answer Defendant's defense or answer: Judge sets the deadline by which Plaintiff will be allowed to answer Defendant's defense or answer. | |
| 14 | Plaintiff's written response to Defendant's defense or answer: Plaintiff responds to Defendant's defense or answer with a written pleading. Plaintiff's answer may or may not include a witness statements or expert (witness) statements. | |
| 15 | Filing of pleadings: Plaintiff and Defendant file written pleadings and submissions with the court and transmit copies of the written pleadings or submissions to one another. The pleadings may or may not include witness statements or expert (witness) statements. | |
| 16 | Adjournments: Court procedure is delayed because one or both parties request and obtain an adjournment to submit written pleadings. | |
| 17 | Framing of issues: Plaintiff and Defendant assist the court in framing issues on which evidence is to be presented. | |
| * | Court appointment of independent expert: Judge appoints, either at the parties' request or at his own initiative, an independent expert to decide whether the quality of the goods Plaintiff delivered to Defendant is adequate. (see assumption 6-b of this case) | |
| 18 | Notification of court-appointment of independent expert: The court notifies both parties that the court is appointing an independent expert. (see assumption 6-b of this case) | |
| * | Delivery of expert report by court-appointed expert: The independent expert appointed by the court delivers his or her expert report to the court. (see assumption 6-b of this case) | |
| 19 | Pre-trial conference on procedure: The judge meets with the parties to discuss procedural issues (for example which applications and motions parties intend to file, which documents parties intend to rely on, what will be presented as evidence the oral hearing or trial, etc.) | |
| * | Setting of date for mediation hearing: The judge sets a date for a mediation hearing, sometimes also called a 'pre-trial conference,' and notifies the parties of the hearing date. | |

| No. | Procedure | |
|-----|--|--|
| 20 | Mediation hearing: The judge during this informal meeting with the parties encourages them to settle the case. The judge acts as mediator. If the case cannot be settled, the judge may draft a pre-trial conference report, after which the case may be allocated to another judg | |
| * | Setting of date(s) for oral hearing or trial: The judge sets the date(s) for the oral hearing or trial. | |
| * | List of (expert) witnesses: The parties file a list of (expert) witnesses with the court. (see assumption 6-a) | |
| 21 | Summoning of (expert) witnesses: The court summons (expert) witnesses to appear in court for the oral hearing or trial. (see assumption 6-a) | |
| 22 | Oral hearing (prevalent in civil law): The parties argue the merits of the case at an oral hearing before the judge. Witnesses and a court-appointed independent expert may be heard and questioned at the oral hearing. | |
| 23 | Adjournments: Court proceedings are delayed because one or both parties request and obtain an adjournment during the oral hearing or trial, resulting in an additional or later trial or hearing date. | |
| * | Final arguments: The parties present their final factual and legal arguments to the court either by oral presentation or by a written submission. | |
| 24 | Judgment date: The judge sets a date for delivery of the judgment. | |
| 25 | Notification of judgment in court: The parties are notified of the judgment at a court hearing. | |
| 26 | Writing of judgment: The judge produces a written copy of the judgment. | |
| 27 | Registration of judgment: The court office registers the judgment after receiving a written copy of the judgment. | |
| 28 | Plaintiff's receipt of a copy of written judgment: Plaintiff receives a copy of the written judgment. | |
| 29 | Notification of Defendant of judgment: Plaintiff or court formally notifies the Defendant of the judgment. The appeal period starts to run the day the Defendant is formally notified of the judgment. | |
| 30 | Appeal period: By law, Defendant has the opportunity to appeal the judgment during a period specified in the law. Defendant decides not to appeal. Judgment becomes final the day the appeal period ends. | |
| 31 | Reimbursement by Defendant of Plaintiff's court fees: The judgment obliges Defendant to reimburse Plaintiff for the court fees Plaintiff has advanced, because Defendant has lost the case. | |
| | Enforcement of judgment: | |
| * | Plaintiff's request for enforcement order: Plaintiff applies to the court to obtain the enforcement order ('seal' on judgment). | |
| 32 | Attachment of enforcement order to judgment: The judge attaches the enforcement order ('seal') to the judgment. | |
| * | Delivery of enforcement order: The court's enforcement order is delivered to a court enforcement officer or a (private) bailiff. | |
| 33 | Request to Defendant to comply voluntarily with judgment: Plaintiff, a court enforcement officer or a (private) bailiff requests Defendant to voluntarily comply with the judgment, giving Defendant a last chance to comply voluntarily with the judgment. | |

| No. | Procedure |
|-----|--|
| 34 | Identification of Defendant's assets for attachment by court official or Defendant: Judge, a court enforcement officer, a (private) bailiff or the Defendant himself identifies Defendant's movable assets for attachment. |
| 35 | Attachment: Defendant's movable goods are attached (physically or by registering, marking or separating assets). |
| 36 | Valuation or appraisal of attached movable goods: The court or court appointed valuation expert evaluates the attached goods. |
| 37 | Sale through public auction: The Defendant's movable property is sold at public auction. |
| 38 | Distribution of proceeds: The proceeds of the public auction are distributed to various creditors (including Plaintiff), according to the rules of priority. |

^{*} Not counted in the total number of procedures.

A robust bankruptcy system functions as a filter, ensuring the survival of economically efficient companies and reallocating the resources of inefficient ones. Fast and cheap insolvency proceedings result in the speedy return of businesses to normal operation and increase returns to creditors. By improving the expectations of creditors and debtors about the outcome of insolvency proceedings, well-functioning insolvency systems can facilitate access to finance, save more viable businesses and thereby improve growth and sustainability in the economy overall.

What do the indicators cover?

Doing Business studies the time, cost and outcome of insolvency proceedings involving domestic entities. It does not measure insolvency proceedings of individuals and financial institutions. The data are derived from survey responses by local insolvency practitioners and verified through a study of laws and regulations as well as public information on bankruptcy systems.

The ranking on the ease of resolving insolvency is based on the recovery rate, which is recorded as cents on the dollar recouped by creditors through reorganization, liquidation or debt enforcement (foreclosure) proceedings. The recovery rate is a function of time, cost and other factors, such as lending rate and the likelihood of the company continuing to operate.

To make the data comparable across economies, *Doing Business* uses several assumptions about the business and the case. It assumes that the company:

- Is a domestically owned, limited liability company operating a hotel.
- Operates in the economy's largest business city.
- Has 201 employees, 1 main secured creditor and 50 unsecured creditors.

WHAT THE RESOLVING INSOLVENCY INDICATORS MEASURE

Time required to recover debt (years)

Measured in calendar years

Appeals and requests for extension are included

Cost required to recover debt (% of debtor's estate)

Measured as percentage of estate value

Court fees

Fees of insolvency administrators

Lawyers' fees

Assessors' and auctioneers' fees

Other related fees

Outcome

Whether business continues operating as a going concern or business assets are sold piecemeal

Recovery rate for creditors (cents on the dollar)

Measures the cents on the dollar recovered by creditors

Present value of debt recovered

Official costs of the insolvency proceedings are deducted

Depreciation of furniture is taken into account

Outcome for the business (survival or not) affects the maximum value that can be recovered

 Has a higher value as a going concern—and the efficient outcome is either reorganization or sale as a going concern, not piecemeal liquidation.

Where does the economy stand today?

Speed, low costs and continuation of viable businesses characterize the top-performing economies. How efficient are insolvency proceedings in Kazakhstan? According to data collected by *Doing Business*, resolving insolvency takes 1.5 years on average and costs 15% of the debtor's estate, with the most likely outcome being that the company will be sold as

piecemeal sale. The average recovery rate is 43.2 cents on the dollar.

Globally, Kazakhstan stands at 54 in the ranking of 189 economies on the ease of resolving insolvency (figure 11.1). The rankings for comparator economies and the regional average ranking provide other useful benchmarks for assessing the efficiency of insolvency proceedings in Kazakhstan.

162

Rank

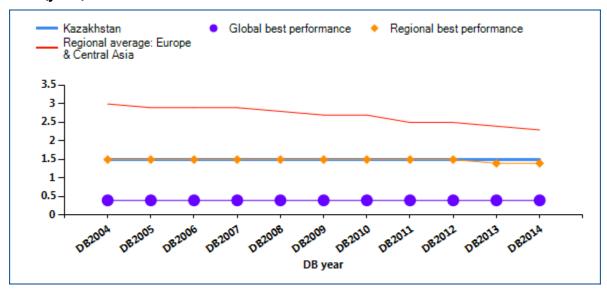

Figure 11.1 How Kazakhstan and comparator economies rank on the ease of resolving insolvency

What are the changes over time?

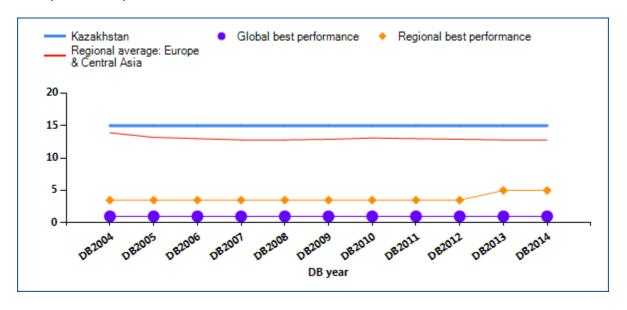

The benchmarks provided by the economies that over time have had the best performance regionally or globally on the time or cost of insolvency proceedings or on the recovery rate (figure 11.2) help show what is possible in improving the efficiency of insolvency proceedings. And changes in regional averages can show where Kazakhstan is keeping up—and where it is falling behind.

Figure 11.2 Has resolving insolvency become easier over time?

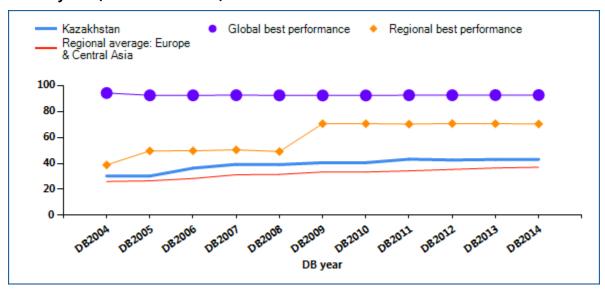

Time (years)

Cost (% of estate)

Recovery rate (cents on the dollar)

Note: DB2013 rankings shown are not last year's published rankings but comparable rankings for DB2013 that capture the effects of such factors as data corrections and the addition of 4 economies (Libya, Myanmar, San Marino and South Sudan) to the sample this year. "No practice" indicates that in each of the previous 5 years the economy had no cases involving a judicial reorganization, judicial liquidation or debt enforcement procedure (foreclosure). This means that creditors are unlikely to recover their money through a formal legal process (in or out of court). The recovery rate for "no practice" economies is 0. Regional averages on time and cost exclude economies with a "no practice" mark.

A well-balanced bankruptcy system distinguishes companies that are financially distressed but economically viable from inefficient companies that should be liquidated. But in some insolvency systems even viable businesses are liquidated. This is starting to

change. Many recent reforms of bankruptcy laws have been aimed at helping more of the viable businesses survive. What insolvency reforms has *Doing Business* recorded in Kazakhstan (table 11.1)?

Table 11.1 How has Kazakhstan made resolving insolvency easier—or not? By *Doing Business* report year

| DB year | Reform | |
|---------|--|--|
| DB2009 | No reform as measured by Doing Business. | |
| DB2010 | No reform as measured by Doing Business. | |
| DB2011 | No reform as measured by Doing Business. | |
| DB2012 | No reform as measured by Doing Business. | |
| DB2013 | Kazakhstan strengthened its insolvency process by introducing an accelerated rehabilitation proceeding, extending the period for rehabilitation, expanding the powers of and improving qualification requirements for insolvency administrators, changing requirements for bankruptcy filings, extending the rights of creditors, changing regulations related to the continuation of operations, introducing a time limit for adopting a rehabilitation plan and adding court supervision requirements. | |
| DB2014 | No reform as measured by Doing Business. | |

Note: For information on reforms in earlier years (back to DB2005), see the *Doing Business* reports for these years, available at http://www.doingbusiness.org.

Doing Business measures flexibility in the regulation of employment, specifically as it affects the hiring and redundancy of workers and the rigidity of working hours. Over the period from 2007 to 2011 improvements were made to align the methodology for the employing workers indicators with the letter and spirit of the International Labour Organization (ILO) conventions. Only 4 of the 188 ILO conventions cover areas measured by Doing Business: employee termination, weekend work, holiday with pay and night work. The Doing Business methodology is fully consistent with these 4 conventions. The ILO conventions covering areas related to the Employing Workers indicators do not include the ILO core labor standards—8 conventions covering the right to collective bargaining, the elimination of forced labor, the abolition of child labor and equitable treatment in employment practices.

Between 2009 and 2011 the World Bank Group worked with a consultative group—including labor lawyers, employer and employee representatives, and experts from the ILO, OECD, civil society and the private sector-to review the employing workers methodology and explore future areas of research. A full report with the conclusions of the consultative available group is http://www.doingbusiness.org/methodology/employin g-workers.

This year *Doing Business* continued research collecting additional data on regulations covering the probationary period for new employees.

Doing Business 2014 presents the data on the employing workers indicators in an annex. The report does not present rankings of economies on the employing workers indicators nor include the topic in the aggregate ranking on the ease of doing business. Detailed data collected on labor regulations and the

employing workers methodology proposed by the consultative group are available on the *Doing Business* website (http://www.doingbusiness.org). The data on employing workers are based on a detailed survey of employment regulations that is completed by local lawyers and public officials. Employment laws and regulations as well as secondary sources are reviewed to ensure accuracy.

To make the data comparable across economies, several assumptions about the worker and the business are used.

The worker:

- Earns a salary plus benefits equal to the economy's average wage during the entire period of his employment.
- Has a pay period that is the most common for workers in the economy.
- Is a lawful citizen who belongs to the same race and religion as the majority of the economy's population.
- Resides in the economy's largest business city.
- Is not a member of a labor union, unless membership is mandatory.

The business:

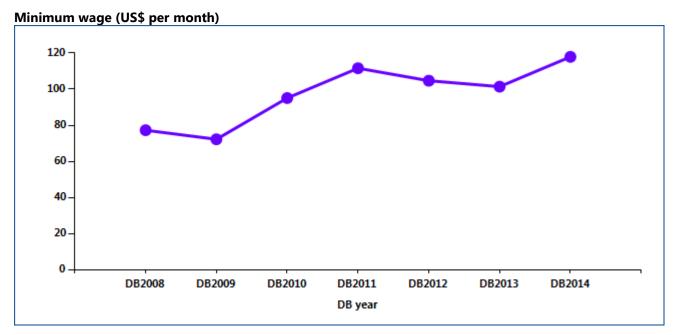

- Is a limited liability company.
- Operates in the economy's largest business city.
- Is 100% domestically owned.
- Operates in the manufacturing sector.
- Has 60 employees.
- Is subject to collective bargaining agreements in economies where such agreements cover more than half the manufacturing sector and apply even to firms not party to them.
- Abides by every law and regulation but does not grant workers more benefits than mandated by law, regulation or (if applicable) collective bargaining agreement.

What do some of the data show?

One of the employing workers indicators is the difficulty of hiring index. This measure assesses, among other things, the minimum wage for a 19-year-old

worker in his or her first job. *Doing Business* data show the trend in the minimum wage applied by Kazakhstan (figure 12.1).

Figure 12.1 Has the minimum wage for a 19-year-old worker or an apprentice increased over time?

Note: A horizontal line along the x-axis of the figure indicates that the economy has no minimum wage. *Source: Doing Business* database.

Employment laws are needed to protect workers from arbitrary or unfair treatment and to ensure efficient contracting between employers and workers. Many economies that changed their labor regulations in the past 5 years did so in ways that increased labor market flexibility. What changes did Kazakhstan adopt that affected the *Doing Business* indicators on employing workers (table 12.1)?

Table 12.1 What changes did Kazakhstan make in employing workers in 2013?

| DB year | Reform |
|---------|--|
| DB2009 | Kazakhstan increased paid annual leave and also introduced a reassignment obligation applicable in cases of redundancy dismissals. |
| DB2010 | No reform as measured by Doing Business. |
| DB2011 | No reform as measured by Doing Business. |
| DB2012 | No reform as measured by Doing Business. |
| DB2013 | No reform as measured by Doing Business. |
| DB2014 | No reform as measured by Doing Business. |

What are the details?

The data on employing workers reported here for Kazakhstan are based on a detailed survey of employment regulations that is completed by local lawyers and public officials. Employment laws and regulations as well as secondary sources are reviewed to ensure accuracy.

Rigidity of employment index

The rigidity of employment index measures 3 areas of labor regulation: difficulty of hiring, rigidity of hours and difficulty of redundancy.

Difficulty of hiring index

The difficulty of hiring index measures whether fixedterm contracts are prohibited for permanent tasks; the maximum cumulative duration of fixed-term contracts; and the ratio of the minimum wage for a trainee or first-time employee to the average value added per worker. (The average value added per worker is the ratio of an economy's gross national income per capita to the working-age population as a percentage of the total population.)

| Difficulty of hiring index | Data |
|---|--------------------------------------|
| Fixed-term contracts prohibited for permanent tasks? | No |
| Maximum length of a single fixed-term contract (months) | No limit - Art. 29, Labor Code, 2007 |
| Maximum length of fixed-term contracts, including renewals (months) | No limit |
| Minimum wage for a 19-year old worker or an apprentice (US\$/month) | 117.9 |
| Ratio of minimum wage to value added per worker | 0.10 |

Rigidity of hours index

The rigidity of hours index has 5 components: whether there are restrictions on night work; whether there are restrictions on weekly holiday work; whether the workweek can consist of 5.5 days or is more than 6 days; whether the workweek can extend to 50 hours or more (including overtime) for 2 months a year to

respond to a seasonal increase in production; and whether the average paid annual leave for a worker with 1 year of tenure, a worker with 5 years and a worker with 10 years is more than 26 working days or fewer than 15 working days.

| Rigidity of hours index | Data |
|--|--|
| Standard workday in manufacturing (hours) | 40 hours/week with a maximum of 8 hours/day if a 5-day workweek or a maximum of 7 hours/day if a 6-day workweek - Arts. 77 and 82 Labor Code, 2007 |
| 50-hour workweek allowed for 2 months a year in case of a seasonal increase in production? | Yes |
| Maximum working days per week | 6.0 |
| Premium for night work (% of hourly pay) in case of continuous operations | 50% |
| Premium for work on weekly rest day (% of hourly pay) in case of continuous operations | 100% |
| Major restrictions on night work in case of continuous operations? | No |
| Major restrictions on weekly holiday in case of continuous operations? | No |
| Paid annual leave for a worker with 1 year of tenure (in working days) | 18.0 |
| Paid annual leave for a worker with 5 years of tenure (in working days) | 18.0 |
| Paid annual leave for a worker with 10 years of tenure (in working days) | 18.0 |
| Paid annual leave (average for workers with 1, 5 and 10 years of tenure, in working days) | 18.0 |

Difficulty of redundancy index

The difficulty of redundancy index has 8 components: whether redundancy is disallowed as a basis for terminating workers; whether the employer needs to notify a third party (such as a government agency) to terminate 1 redundant worker; whether the employer needs to notify a third party to terminate a group of 9 redundant workers; whether the employer needs approval from a third party to terminate 1 redundant

worker; whether the employer needs approval from a third party to terminate a group of 9 redundant workers; whether the law requires the employer to reassign or retrain a worker before making the worker redundant; whether priority rules apply for redundancies; and whether priority rules apply for reemployment.

| Difficulty of redundancy index | Data |
|--|------|
| Dismissal due to redundancy allowed by law? | Yes |
| Third-party notification if 1 worker is dismissed? | Yes |
| Third-party approval if 1 worker is dismissed? | No |
| Third-party notification if 9 workers are dismissed? | Yes |
| Third-party approval if 9 workers are dismissed? | No |
| Retraining or reassignment obligation before redundancy? | Yes |
| Priority rules for redundancies? | No |
| Priority rules for reemployment? | No |

Redundancy cost

The redundancy cost indicator measures the cost of advance notice requirements, severance payments and penalties due when terminating a redundant worker, expressed in weeks of salary. The average value of notice requirements and severance payments applicable to a worker with 1 year of tenure, a worker with 5 years and a worker with 10 years is used to assign the score.

| Redundancy cost indicator | Data |
|--|------|
| Notice period for redundancy dismissal (for a worker with 1 year of tenure, in salary weeks) | 4.3 |
| Notice period for redundancy dismissal (for a worker with 5 years of tenure, in salary weeks) | 4.3 |
| Notice period for redundancy dismissal (for a worker with 10 years of tenure, in salary weeks) | 4.3 |
| Notice period for redundancy dismissal (average for workers with 1, 5 and 10 years of tenure, in salary weeks) | 4.3 |
| Severance pay for redundancy dismissal (for a worker with 1 year of tenure, in salary weeks) | 4.3 |
| Severance pay for redundancy dismissal (for a worker with 5 years of tenure, in salary weeks) | 4.3 |
| Severance pay for redundancy dismissal (for a worker with 10 years of tenure, in salary weeks) | 4.3 |
| Severance pay for redundancy dismissal (average for workers with 1, 5 and 10 years of tenure, in salary weeks) | 4.3 |

DATA NOTES

The indicators presented and analyzed in Doing Business measure business regulation and the protection of property rights—and their effect on businesses, especially small and medium-size domestic firms. First, the indicators document the complexity of regulation, such as the number of procedures to start a business or to register and transfer commercial property. Second, they gauge the time and cost to achieve a regulatory goal or comply with regulation, such as the time and cost to enforce a contract, go through bankruptcy or trade across borders. Third, they measure the extent of legal protections of property, for example, the protections of investors against looting by company directors or the range of assets that can be used as collateral according to secured transactions laws. Fourth, a set of indicators documents the tax burden on businesses. Finally, a set of data covers different aspects of employment regulation. The 11 sets of indicators measured in Doing Business were added over time, and the sample of economies expanded.

The data for all sets of indicators in *Doing Business* 2014 are for June 2013.²

Methodology

The Doing Business data are collected in a standardized way. To start, the Doing Business team, with academic advisers, designs a questionnaire. The questionnaire uses a simple business case to ensure comparability across economies and over time-with assumptions about the legal form of the business, its size, its location and the nature of its operations. Questionnaires are administered to more than 10,200 local experts, including lawyers, business consultants, accountants, freight forwarders, government officials and other professionals routinely administering or advising on legal and regulatory requirements (table 21.2). These experts have several rounds of interaction with the Doing Business team, involving conference calls, written correspondence and visits by the team. For Doing Business 2014 team members visited 33 economies to verify data and recruit respondents. The data from questionnaires are subjected to numerous

rounds of verification, leading to revisions or expansions of the information collected.

ECONOMY CHARACTERISTICS

Gross national income per capita

Doing Business 2014 reports 2012 income per capita as published in the World Bank's World Development Indicators 2013. Income is calculated using the Atlas method (current U.S. dollars). For cost indicators expressed as a percentage of income per capita, 2012 gross national income (GNI) in U.S. dollars is used as the denominator. GNI data were not available from the World Bank for Afghanistan, The Bahamas, Bahrain, Barbados, Brunei Darussalam, Djibouti, the Islamic Republic of Iran, Kuwait, Libya, Myanmar, New Zealand, Oman, San Marino, the Syrian Arab Republic, West Bank and Gaza, and the Republic of Yemen. In these cases GDP or GNP per capita data and growth rates from other sources, such as the International Monetary Fund's World Economic Outlook database and the Economist Intelligence Unit, were used.

Region and income group

Doing Business uses the World Bank regional and income group classifications, available at http://data.worldbank.org/about/country-classifications. The World Bank does not assign regional classifications to high-income economies. For the purpose of the *Doing Business* report, high-income OECD economies are assigned the "regional" classification *OECD high income*. Figures and tables presenting regional averages include economies from all income groups (low, lower middle, upper middle and high income).

Population

Doing Business 2014 reports midyear 2012 population statistics as published in World Development Indicators 2013.

The *Doing Business* methodology offers several advantages. It is transparent, using factual information about what laws and regulations say and allowing multiple interactions with local respondents to clarify

² The data for paying taxes refer to January – December 2012.

potential misinterpretations of questions. Having representative samples of respondents is not an issue; Doing Business is not a statistical survey, and the texts of the relevant laws and regulations are collected and answers checked for accuracy. The methodology is inexpensive and easily replicable, so data can be collected in a large sample of economies. Because standard assumptions are used in the data collection, comparisons and benchmarks are valid across economies. Finally, the data not only highlight the extent of specific regulatory obstacles to business but also identify their source and point to what might be reformed. Information on the methodology for each Doing Business topic can be found on the Doing **Business** website http://www.doingbusiness.org/methodology.

Limits to what is measured

The Doing Business methodology has 5 limitations that should be considered when interpreting the data. First, the collected data refer to businesses in the economy's largest business city (which in some economies differs from the capital) and may not be representative of regulation in other parts of the economy. To address this limitation, subnational Doing Business indicators were created (box 21.1). Second, the data often focus on a specific business form—generally a limited liability company (or its legal equivalent) of a specified size—and may not be representative of the regulation on other businesses, for example, sole proprietorships. Third, transactions described in a standardized case scenario refer to a specific set of issues and may not represent the full set of issues a business encounters. Fourth, the measures of time involve an element of judgment by the expert respondents. When sources indicate different estimates, the time indicators reported in *Doing Business* represent the median values of several responses given under the assumptions of the standardized case.

Finally, the methodology assumes that a business has full information on what is required and does not waste time when completing procedures. In practice, completing a procedure may take longer if the business lacks information or is unable to follow up promptly. Alternatively, the business may choose to disregard some burdensome procedures. For both reasons the time delays reported in *Doing Business* 2014 would differ from the recollection of

entrepreneurs reported in the World Bank Enterprise Surveys or other perception surveys.

This year *Doing Business* completed subnational studies in Colombia, Italy and the city of Hargeisa (Somaliland) and is currently updating indicators in Egypt, Mexico and Nigeria. *Doing Business* also published regional studies for the g7+ and the East African Community. The g7+ group is a country-owned and country-led global mechanism established in April 2010 to monitor, report and draw attention to the unique challenges faced by fragile states. The member countries included in the report are Afghanistan, Burundi, the Central African Republic, Chad, the Comoros, the Democratic Republic of Congo, Côte d'Ivoire, Guinea, Guinea-Bissau, Haiti, Liberia, Papua New Guinea, Sierra Leone, the Solomon Islands, South Sudan, Timor-Leste and Togo.

The subnational studies point to differences in business regulation and its implementation—as well as in the pace of regulatory reform—across cities in the same economy. For several economies subnational studies are now periodically updated to measure change over time or to expand geographic coverage to additional cities. This year that is the case for all the subnational studies published.

Changes in what is measured

The methodology for 2 indicator sets—trading across borders and paying taxes—was updated this year. For trading across borders, documents that are required purely for purposes of preferential treatment are no longer included in the list of documents (for example, a certificate of origin if the use is only to qualify for a preferential tariff rate under trade agreements). For paying taxes, the value of fuel taxes is no longer included in the total tax rate because of the difficulty of computing these taxes in a consistent way across all economies covered. The fuel tax amounts are in most cases very small, and measuring these amounts is often complicated because they depend on fuel consumption. Fuel taxes continue to be counted in the number of payments.

In a change involving several indicator sets, the rule establishing that each procedure must take at least 1 day was removed for procedures that can be fully completed online in just a few hours. This change affects the time indicator for starting a business,

dealing with construction permits and registering property.³ For procedures that can be fully completed online, the duration is now set at half a day rather than a full day.

The threshold for the total tax rate introduced in 2011 for the purpose of calculating the ranking on the ease of paying taxes was updated. All economies with a total tax rate below the threshold (which is calculated and adjusted on a yearly basis) receive the same ranking on the total tax rate indicator. The threshold is not based on any economic theory of an "optimal tax rate" that minimizes distortions or maximizes efficiency in the tax system of an economy overall. Instead, it is mainly empirical in nature, set at the lower end of the distribution of tax rates levied on medium-size enterprises in the manufacturing sector as observed through the paying taxes indicators. This reduces the bias in the indicators toward economies that do not need to levy significant taxes on companies like the Doing Business standardized case study company because they raise public revenue in other ways—for example, through taxes on foreign companies, through taxes on sectors other than manufacturing or from natural resources (all of which are outside the scope of the methodology). This year the threshold is 25,5%.

Data challenges and revisions

Most laws and regulations underlying the *Doing Business* data are available on the *Doing Business* website at http://www.doingbusiness.org. All the sample questionnaires and the details underlying the indicators are also published on the website. Questions on the methodology and challenges to data can be submitted through the website's "Ask a Question" function at http://www.doingbusiness.org.

Ease of doing business and distance to frontier

Doing Business 2014 presents results for 2 aggregate measures: the aggregate ranking on the ease of doing business and the distance to frontier measure. The ease of doing business ranking compares economies

with one another, while the distance to frontier measure benchmarks economies to the frontier in regulatory practice, measuring the absolute distance to the best performance on each indicator. Both measures can be used for comparisons over time. When compared across years, the distance to frontier measure shows how much the regulatory environment for local entrepreneurs in each economy has changed over time in absolute terms, while the ease of doing business ranking can show only relative change.

Ease of doing business

The ease of doing business index ranks economies from 1 to 189. For each economy the ranking is calculated as the simple average of the percentile rankings on each of the 10 topics included in the index in Doing Business 2014: starting a business, dealing with construction permits, getting electricity, property, getting credit, protecting registering investors, paying taxes, trading across borders, enforcing contracts, and resolving insolvency. The employing workers indicators are not included in this year's aggregate ease of doing business ranking.

Construction of the ease of doing business index

Here is one example of how the ease of doing business index is constructed. In Denmark it takes 4 procedures, 5.5 days and 0.2% of annual income per capita in fees to open a business. The minimum capital requirement is 24% of annual income per capita. On these 4 indicators Denmark ranks in the 12th, 11th, 1st and 79th percentiles. So on average Denmark ranks in the 25th percentile on the ease of starting a business. It ranks in the 21st percentile on getting credit, 19th percentile on paying taxes, 27th percentile on enforcing contracts, 5th percentile on resolving insolvency and so on. Higher rankings indicate simpler regulation and stronger protection of property rights. The simple average of Denmark's percentile rankings on all topics is 17th. When all economies are ordered by their average percentile rankings, Denmark stands at 5 in the aggregate ranking on the ease of doing business.

More complex aggregation methods—such as principal components and unobserved components—yield a ranking nearly identical to the simple average

³ For getting electricity the rule that each procedure must take a minimum of 1 day still applies because in practice there are no cases in which procedures can be fully completed online in less than a day. For example, even though in some cases it is possible to apply for an electricity connection online, additional requirements mean that the process cannot be completed in less than 1 day.

used by *Doing Business*.⁴ Thus, *Doing Business* uses the simplest method: weighting all topics equally and, within each topic, giving equal weight to each of the topic components.

If an economy has no laws or regulations covering a specific area—for example, insolvency—it receives a "no practice" mark. Similarly, an economy receives a "no practice" or "not possible" mark if regulation exists but is never used in practice or if a competing regulation prohibits such practice. Either way, a "no practice" mark puts the economy at the bottom of the ranking on the relevant indicator.

The ease of doing business index is limited in scope. It does not account for an economy's proximity to large markets, the quality of its infrastructure services (other than services related to trading across borders and getting electricity), the strength of its financial system, the security of property from theft and looting, macroeconomic conditions or the strength of underlying institutions.

Variability of economies' rankings across topics

Each indicator set measures a different aspect of the business regulatory environment. The rankings of an economy can vary, sometimes significantly, across indicator sets. The average correlation coefficient between the 10 indicator sets included in the aggregate ranking is 0.38, and the coefficients between any 2 sets of indicators range from 0.18 (between getting electricity and getting credit) to 0.58 (between trading across borders and resolving insolvency and between trading across borders and getting electricity). These correlations suggest that economies rarely score universally well or universally badly on the indicators.

Consider the example of Canada. It stands at 19 in the aggregate ranking on the ease of doing business. Its ranking is 2 on starting a business, 4 on protecting investors, and 8 on paying taxes. But its ranking is only

⁴ See Simeon Djankov, Darshini Manraj, Caralee McLiesh and Rita Ramalho, "Doing Business Indicators: Why Aggregate, and How to Do It" (World Bank, Washington, DC, 2005). Principal components and unobserved components methods yield a ranking nearly identical to that from the simple average method because both these methods assign roughly equal weights to the topics, since the pairwise correlations among indicators do not differ much. An alternative to the simple average method is to give different weights to the topics, depending on which are considered of more or less importance in the context of a specific economy.

58 on enforcing contracts, 116 on dealing with construction permits and 145 on getting electricity.

Variation in performance across the indicator sets is not at all unusual. It reflects differences in the degree of priority that government authorities give to particular areas of business regulation reform and the ability of different government agencies to deliver tangible results in their area of responsibility.

Distance to frontier measure

A drawback of the ease of doing business ranking is that it can measure the regulatory performance of economies only relative to the performance of others. It does not provide information on how the absolute quality of the regulatory environment is improving over time. Nor does it provide information on how large the gaps are between economies at a single point in time.

The distance to frontier measure is designed to address both shortcomings, complementing the ease of doing business ranking. This measure illustrates the distance of an economy to the "frontier," and the change in the measure over time shows the extent to which the economy has closed this gap. The frontier is a score derived from the most efficient practice or highest score achieved on each of the component indicators in 10 Doing Business indicator sets (excluding the employing workers indicators) by any economy. In starting a business, for example, Canada and New Zealand have achieved the highest performance on the number of procedures required (1) and on the time (0.5 days), Denmark and Slovenia on the cost (0% of income per capita) and Chile, Zambia and 99 other economies on the paid-in minimum capital requirement (0% of income per capita) (table 22.2).

Calculating the distance to frontier for each economy involves 2 main steps. First, individual indicator scores are normalized to a common unit: except for the total tax rate, each of the 31 component indicators y is rescaled to (max – y)/(max – min), with the minimum value (min) representing the frontier—the highest performance on that indicator across all economies since 2003 or the first year the indicator was collected.⁵ For the total tax rate, consistent with the calculation of

⁵ Even though scores for the distance to frontier are calculated from 2005, data from as early as 2003 are used to define the frontier

the rankings, the frontier is defined as the total tax rate at the 15th percentile of the overall distribution of total tax rates for all years. Second, for each economy the scores obtained for individual indicators are aggregated through simple averaging into one distance to frontier score, first for each topic and then across all topics. An economy's distance to frontier is indicated on a scale from 0 to 100, where 0 represents the lowest performance and 100 the frontier.

The maximum (max) and minimum (min) observed values are computed for all economies included in the Doing Business sample since 2003 and for all years (from 2003 to 2013). To mitigate the effects of extreme outliers in the distributions of the rescaled data (very few economies need 694 days to complete the procedures to start a business, but many need 9 days), the maximum (max) is defined as the 95th percentile of the pooled data for all economies and all years for each indicator. The exceptions are the getting credit, investors and resolving insolvency indicators, whose construction precludes outliers. In addition, the cost to export and cost to import for each year are divided by the GDP deflator, so as to take the general price level into account when benchmarking these absolute-cost indicators across economies with different inflation trends. The base year for the deflator is 2013 for all economies.

The difference between an economy's distance to frontier score in any previous year and its score in 2013 illustrates the extent to which the economy has closed the gap to the frontier over time. And in any given year the score measures how far an economy is from the highest performance at that time.

Take Colombia, which has a score of 70.5 on the distance to frontier measure for 2014. This score indicates that the economy is 29.5 percentage points away from the frontier constructed from the best performances across all economies and all years. Colombia was further from the frontier in 2009, with a score of 66.2. The difference between the scores shows an improvement over time.

The distance to frontier measure can also be used for comparisons across economies in the same year, complementing the ease of doing business ranking. For example, Colombia stands at 63 this year in the ease of doing business ranking, while Peru, which is 29.3 percentage points from the frontier, stands at 42.

Economies that improved the most across 3 or more Doing Business topics in 2012/13

Doing Business 2014 uses a simple method to calculate which economies improved the most in the ease of doing business. First, it selects the economies that in 2012/13 implemented regulatory reforms making it easier to do business in 3 or more of the 10 topics included in this year's ease of doing business ranking.⁶ Twenty-nine economies meet this criterion: Azerbaijan, Belarus, Burundi, Côte d'Ivoire, Croatia, Djibouti, Gabon, Guatemala, Guinea, Italy, Kosovo, Latvia, the former Yugoslav Republic of Macedonia, Malaysia, Mauritius, Mexico, Moldova, Mongolia, Morocco, Panama, the Philippines, the Republic of Congo, Romania, the Russian Federation, Rwanda, Sri Lanka, Ukraine, Uzbekistan and the United Arab Emirates. Second, Doing Business sorts these economies on the increase in their distance to frontier measure from the previous year using comparable data.

Selecting the economies that implemented regulatory reforms in at least 3 topics and improved the most in the distance to frontier measure is intended to highlight economies with ongoing, broadbased reform programs. The criterion for identifying the top improvers was changed from last year. The improvement in ease of doing business ranking is no longer used. The improvement in the distance to frontier measure is used instead because under this measure economies are sorted according to their absolute improvement instead of relative improvement.

⁶ *Doing Business* reforms making it more difficult to do business are subtracted from the total number of those making it easier to do business.
